A PROJECT REPORT ON  
INVENTORY MANAGEMENT SYSTEM FOR ABU ABEER AL  
GAWABRY TRADING

By

18F18274 IMMANUEL SAM SUHIRTHARAJ

June 2022

## **DECLARATION**

I, **IMMANUEL SAM SUHIRTHARAJ**, hereby declare that the work presented herein is genuine and has not been copied in part or in whole from any other source except where duly acknowledged. As such, all use of previously published work (from books, journals, magazines, internet, etc.) has been acknowledged with the main report to an item in the references or bibliography lists.

### **Copyright Acknowledgement**

We acknowledge that the copyright of this project and report belongs to MEC.

## **ACKNOWLEDGEMENT**

I'd want to offer my profound thanks and gratitude to everyone who has helped me and supported me throughout this project, as well as in the preparation and drafting of this report. The source of information for this study was provided by a faculty member of the Department of Computing and the Head, Faculty of Department. The supervisor deserves praise as well for reviewing and double-checking the structure of this report, as well as providing us with help and advice throughout the project.

## **ABSTRACT**

This project sufficiently depicts the Inventory Management System to determine the feasibility and convenience of a fully functional system. The fundamental concept is to follow the trade from the storage of inventory and sales registers, with additional highlights to help comprehend the data.

In businesses that handle transactions involving consumer goods, an inventory management process is important for quality control. A significant retail business might run out of inventory on a critical item if inventory is not managed correctly. When it's time to refill, a good Inventory Management System will alert the merchant. An inventory system is also useful for tracking larger shipments automatically.

Counting each item by hand is likely to result in a mistake. The use of an automated Inventory Management System can aid to lower the risk of human error. An Inventory Management System at a retail business also facilitates in the tracking of retail product loss, offering valuable insights store revenues and the need for theft-prevention devices.

The approach taken to complete this project is DSDM methodology. This model is easy to comprehend and provides a beneficial method to proceed with the project.

7. DSDM- Dynamic System Development Method
8. UML- Unified modelling language
9. DFD- Data flow diagram
10. UI- User Interface

# **Chapter 1: Introduction**

## **1.1 Introduction about the organization**

Abu Abeer Al Gawabry trading is a construction material supplier company that was founded in 2004 in the sultanate of Oman. The company specializes in the trading of construction materials such as plywood, products that are based on plywood, ceramic materials, metals, lumber and lumber-based products, thermal insulation products, chemicals related to construction and others.

The division of their work is mainly targeted towards offering supplies and products to the construction of large-scale contracts such as buildings, highways, bridges as well as small scale contracts

Abu Abeer Al Gawabry trading has established itself successfully in the supply and demand market in the sultanate of Oman and provide a vast and versatile range of products. The company is fully licensed and specialized in all the fields of building materials, maintenance, and refurbishments. They have a range of well-trained work force comprised of high skill workers which accumulates over a fifty years of work experience and provide the best service available and follow proper work ethics within the Sultanate of Oman.

## **1.2 Problem statement**

There are many problems being faced by the company. The company does not have a balanced system to be used to keep a record of their inventory and their data since the current system is not systematic. Due to this reason, it is difficult for the administrator to keep a record of the inventory and data. It is a threat to safety and time since the data currently being stored is in the form of a logbook and a primitive system which makes the current system unorganized.

### **1.2.1 The current system**

The current system used by the company is primarily manual. This causes difficulty for the staff to analyze their profit. The newly developed web application will assist in managing the inventory an easy job and helps save time and keeps the system secure. It will solve most of the current issues that are being faced by the company.

### **1.2.2 Problem faced**

The process of recording the data into the inventory takes a lot of time. It becomes a heavy workload on the employees and managers of the company to input data manually and one by one which leads to wastage of time and information and data can be lost in the process. This in turn affects the profit that can be made and result in a data loss that can pose a major threat to the organization

### **1.2.3 Solution to the existing problem**

An automated inventory management system will be created to save a lot of time. The web application will help keep records of customer details, banks, payments ledgers with minimum manual input which helps save a lot of time. The credentials of the users are software protect which means there will be no data loss. The system can only be accessed by the authority of the admin/manager.

## **1.3 Project scope statement**

The inventory management system web application is solely developed for the purpose of making the workflow of the organization simpler and smooth. This will benefit the Manager as well as the employees who choose to use the system.

The primary objective of this project is to deliver a stock and inventory management system that is efficient and easy to use. The web application contains two modules, for the manager and for the employees. The scope of the project will focus on issues such as database, report generation, and the store's point of sale in order to meet the specified objectives.

This new system will include a database that allows for the storage and retrieval of transaction data as well as inventory data for each item in the shop, as well as the management of product releases and storage, and the summarization of point of sales. This would result in quicker work improvisation with less time and effort. This system is supposed to aid in making the appropriate decision in the process of managing inventory aligned with the sales level in the shop, since the objective of Sales and Inventory Management System is to decrease paper effort and ineffective ways of managing inventory.

### **1.3.1 Project objectives**

- implement an inventory management system for Abu Abeer al Gawabry trading.
- provide the organization with the modern inventory system
- Help the users analyze the profit and loss in a graphical format.
- To develop an inventory management system that is simple and easy to use.
- To make a secure system that can store personal details of customers, banks ledgers and payment systems.
- Develop a web application to monitor the stock-in and stock-out in an efficient manner.
- To generate a report based on the sales and produces monthly sales logs

### **1.3.2 Duration of the project**

The project is expected to be completely done in a duration of four months from the 15<sup>th</sup> of October 2021 to March 22nd of 2022. The initial stages that include report making began in the beginning of November and the final stages that include the development of the system will be completed in a span of 4 months

### 1.3.3 Cost benefit analysis

Cost benefit compares the predicted or estimated costs and the benefits (or opportunities) linked to the project choice to determine whether it is reasonable from a business perspective.

Cost benefit analysis is used for the evaluation of the benefits with respect to the cost of doing a project. The project is then checked if its worth the effort, resources and funds after finding the difference between the cost and the benefit.

#### Cost

Category	Type	Term 1	Term 2	Total in OMR
Hardware	Computer	OMR. 500	-	OMR.500
	Internet	OMR. 35	OMR. 35	OMR. 70
	Peripherals	OMR. 20	-	OMR. 20
	Servers	OMR. 4	OMR. 4	OMR.8
Software	Microsoft Word	OMR. 10	-	OMR.10
	Microsoft Windows	OMR. 20	-	OMR.20
	Product license	OMR. 10	-	OMR. 10
Total				OMR. 638

Table 1: Cost table

## Benefits

Quantitative benefits	Term 1	Term 2	Total
Cost of service	OMR. 30	OMR. 30	OMR. 60
Productivity Gains	OMR. 2000	OMR. 2300	4300
Savings from business improvements	OMR. 700	OMR. 720	OMR. 1420
Savings from optimized information flow	OMR. 32	OMR. 33	OMR. 55
<b>Total</b>			<b>OMR. 5835</b>

Table 2: benefit table

Profit made- OMR 5197

### 1.3.4 Software and programs used.

#### 1. Microsoft visual studio code

The entire system will be coded using Microsoft visual studio code.

Microsoft visual studio code is a free open-source software that is used to edit code. It is made by Microsoft that runs on MacOS, Windows and Linux operating systems. It has so many outstanding features that make coding and debugging easy.

#### 2. Django

Django is a master level web framework on python which will enable us to develop a sophisticated web application that has a clean and professional design. It makes the tasks of web development easy. Django is a free and open-source software.

### **3. Python**

Python is a high-level programming language that is object oriented. The project will be build using python because python supports tons of modules and packages for making software development easy. Python is also the most productive programing language.

### **4. Bootstrap**

Bootstrap is an open-source software that is used for designing web pages using HTML and CSS frameworks. It has JavaScript and CSS framework that comes along with it. Bootstrap has five version. The project will be build using Bootstrap version 4.9 since it is the most stable.

#### **1.3.5 Functionality of the system proposed**

The inventory management system web application is built using the python Django framework. The system uses Django framework, JavaScript, and CSS as the backend and python as the front-end. The system enables the users to check the products, manage the suppliers, check the categories, managing the orders and makes the modifications of them easy.

The management level users can add, delete, edit, and delete items. This is only possible if the person logging in is an employee or manager. The system is simple and organized in a very simple manner and any user can implement it ease.

##### **1.3.5.1 Features of the system.**

1. **Login function:** The login function is used for the admin/manager and employees to login to the system. The admin/managers have the privilege to add new employees with their own privileges into the system
2. **Add item category:** This function allows the employees and manager/admin to create a category for the items which makes it easier to group them since there are different types of categories for building materials such as tools, paint etc.
3. **Add product:** This function allows the users to add a product by name, category and by the date it was added.

4. **List of products:** The list of all products added appears here. It also has some modules inside it such as:
  - **Update product:** This allows the users to update the information previously input into the product list page
  - **Stock in:** This allows the users to add more stock based on the name and category, cost price of the item, percentage of buying the item date the stock came in, quantity of the stock, selling price of the item
  - **Stock out:** This allows the user to custom add the stock that leaves the inventory based on the product category and name, quantity of the stock leaving and date the stock will leave.
5. **Add customer:** This allows the users to add and save the personal information about the customers which include name, second name, personal pin of the customer, city, mobile number, alternate mobile number, nationality, and their complete address
6. **Customer list:** This function helps view the list of customers along with some more function such as:
  - **Update customer details:** Updates the customer details based on the information used to add them
  - **Customer ledger:** add the credit and debit information of customers based on the date and financial details.
  - Customers can be searched based on name and pin
7. **Banking system:** This function is used to store the bank information of the company based on the bank name, branch of the bank, account number and date
8. **Bank List:** This is used to update bank details
  - Banks can be searched based on name and account number
9. **Add expense:** This function is used for adding any expense that the company faces along with the amount required, date of the requirement and details of the requirement.
10. **Expense List:** The expense list shows all the expenses and the function to update them or delete them

11. **Sales function:** This is the most important function of the system. The item can be added for sales purposes.
12. Once the name of the item is selected from the drop-down menu, the stock, price, and the total amount will already be calculated.
13. **Billing function:** The billing function is used to create the invoice.
  - There are two options to choose from the billing function, cash, or installments. Once the received amount from the customer ledger and in cash is received.
  - There will be an option to create invoice. This allows the employee to view the invoice, save it in pdf format and print it.
  - A new customer can be created from the page too while billing.
14. **Invoices list:** This function shows the list of all the invoices based on the date, invoice number, customer name, type of payment, quantity of the order, subtotal, and grand total.
  - View invoice: view the invoice in a printable format which further allows to print invoice or create another invoice.
  - View payment type: View the installments and also delete the installments
  - Search: Invoices can be searched using the name, invoice number and date added.
15. **Logs:** This function is used to show the logs of the sales based on daily basis and monthly basis.
  - **Daily basis:** shows the item name, number of invoices for the item, and the stock that has left the company. This can be searched using the search function based on the name and can be filtered using the date.
  - **Monthly basis:** Shows the sales on monthly basis based on item name, number of invoices for the item, and the stock that has left the company. This can be searched using the search function based on the name and can be filtered using the month
16. **Report:** This shows the monthly report based on the sales per month and date in a visualized manner. It also gives an overview of the total sales in the current month

based on date, total customers, total quantity of orders, grand total, total paid in cash.

17. **The admin panel:** The admin has various function from the backend perspective. They can do all the function that an employee can but also give special privileges to the user of the system such as give them some special user permissions like making employees admin, adding new users to the system.
18. **Low quantity notification:** when an item in the inventory is low, there will be a notification saying the stock is less
19. **Logout:** after using the system, users can logout

## 1.4 Stakeholder

### 1.4.1 Definitions

**Stakeholder:** In a software development project, a stakeholder is an entity that is involved in a project or affected by it. Stakeholders can exist outside the development circle or outside it. The primarily focus on the finished end of the project. The stakeholder of a project can be involved directly or indirectly

**External stakeholder:** External stakeholders are not involved directly with a project. They are affected by the outcomes of the project.

Examples of external stakeholders are creditors, suppliers, and the public entities

**Internal stakeholder:** The interest of internal stakeholders aligns inside the project. They have a direct relationship to the project development.

Example: Employer, manager, investor etc.

## 1.4.2 Stakeholder analysis

S.no	Stakeholder type	Stakeholder	Stakeholder Impact
1	External stakeholders	<ul style="list-style-type: none"><li>• College</li><li>• Customers</li><li>• Internet provider</li></ul>	The outcome of the web application is affected indirectly by the external stakeholders based on the requirements. They are not directly associated with the project but are related.
2	Internal stakeholders	<ul style="list-style-type: none"><li>• Employees</li><li>• Admin/manager</li><li>• Developer</li></ul>	The internal stakeholders are directly associated in the project

## 1.5 Interfaces

### 1.5.1 External interfaces

The web application will be compatible with most of the common internet browsers such as Google Chrome, Apple Safari, Microsoft Internet Explorer, Opera and Mozilla Firefox

#### Minimum Requirements

- A computer
- Web browser
- Windows or Mac operating system that is updated to modern standards
- Internet connection

## **1.6 Aims and objectives**

### **1.6.1 Stating Aim**

The primary aim of the project will be designing and developing an inventory material management system for, and organization called Abu Abeer al Gawabry trading.

Abu Abeer Al Gawabry trading currently has a system that is outdated and can only do basic

functions like adding, updating, deleting items along with basic calculation functions.

The project will give the company a new system that will be used to add item category, add product, view list of products, edit the list of products with more functions such as stock in, stock out, add customer information, update customer information, banking system, expense system, sales, stocks, and reports.

### **1.6.2 Objectives**

The proposed system will make everything better and will give the system

- To develop an inventory management system that is simple and easy to use.
- To make a secure system that can store personal details of customers, banks ledgers and payment systems.
- Develop a web application to monitor the stock-in and stock-out in an efficient manner.
- To generate a report based on the sales and produces monthly sales logs

## **1.7 Contribution of the project**

The proposed system will make the workflow of the company efficient and will be beneficial for the staff, manager, and the customers to do better business and save a lot of time. This will motivate more companies to automate their process and make the task performed on a day-to-day basis easier and reduces workload for the employees and managers.

The project will provide the company with a new system that will be used to add item categories, add products, view product lists, edit product lists, and perform other tasks such as stock in, stock out, add customer information, update customer information, banking, expense management, sales, stocks, and reports.

## **1.8 Report outline**

In chapter 2, there will be a literature review based on the selected topic. Five similar applications that already exist will be critically analyzed using CU Harvard style referencing and finally a feasibility analysis will be conducted.

Chapter 2 will talk about the background of the project. It will give some insight into why the project is being initiated. It also contains similar systems that are already in use along with their advantages and disadvantages along with comparison. It also has a literature from few articles based on inventory management and VSCode. Feasibility analysis is also done in this chapter along with the explanation of different types of feasibility with respect to the system

Chapter 3 contains the analysis of different methodologies that are suitable for commencing forth with the project. Different methodologies will be analyzed with SWOT analysis and comparisons will be done. Chapter 3 will also contain a different data visualization to prove that the project is required. It will also contain different diagrams such as use case diagram, sequence diagram, network diagram, context diagram etc. Screenshots of the initial prototypes of the system will also be provided

Chapter 4 is based on designing the system. This will contain use case diagrams and sequence diagram of the system being implemented along with screenshots

Chapter 5 is about developing and evaluating the system. This includes information about the system and screenshots explaining what each page does. This also includes testing the system for security issues and flaws.

The final chapter is chapter 6. This includes conclusions and recommendations of the system. It will contain the practicality of the system and recommendation of similar system for future use. Ethical impacts of the system will also be included. Sustainability aspects of the project will also be included

# **Chapter 2: Literature Review and Feasibility Analysis**

## **2.1 Background of chapter**

The project focuses on providing the selected organization a very simple method to analyze the inventory they have along with maintaining customer and bank ledgers. The proposed system is much more effective for storing and retrieving data which makes it less prone to data manipulation.

The chapter contains a list of similar existing system that already exist in the modern world. They will be analyzed based on the advantages and disadvantages.

This chapter will explain why the project was started in the first place. It also includes similar systems that are now in use, as well as their benefits and drawbacks, as well as a comparison. It also includes a bibliography of a few works on inventory management and VSCode. This chapter also includes a feasibility study as well as an explanation of the various types of feasibility with relation to the system.

### **2.1.1 Structure of the chapter**

This chapter focuses more on the literature review and feasibility analysis of the system. Section 2.2 will provide information on five similar systems that are currently in use along with citations. Section 2.3 will include literature reviews that are available based on the software's required for the system and the relationship of the system to the project will be explained. Section 2.4 is the feasibility analysis which will talk about the hardware and software requirements and the additional costs.

## 2.2 Similar systems

### 1. Silver Inventory system

Silver Inventory System is an internationally used application, particularly by small to medium-sized businesses in need of a mid-range, cost-effective independent stock application with a reasonable set of features. Silver Inventory System is a complete and cost-effective application. It features a user-friendly, easy-to-understand UI that may be utilized without the need for training. The system employs a point-of-sale panel that allows for real-time purchases and transactions. User access functions are available in the security system and can be managed based on access level or role. Unauthorized users are prevented from gaining access using secured access. The user has the option of exporting reports as Excel spreadsheets. In addition, it wires charges for ordered products and purchase orders while holding inventories for sales orders.

### 2. Zoho inventory management system

Zoho is one of the most well-known distributors of small-scale business applications and solutions. e-Commerce enterprises, online sellers, retailers, wholesalers, and small and medium-sized organizations can all benefit from it. Zoho has 45 Software as a Service (SaaS) products that help manage businesses from start to finish.

Advantages and disadvantages of Zoho inventory management system

Advantages	Disadvantages
Has varieties of distribution functions	Forecasting is unavailable
Can track inventory in other warehouses	No bill and ID support
The system also provides trading and purchasing sorting capabilities.	Some functions are available in certain countries
Supports tags and barcodes	Supports FIFO costing
Has a built-in marketing tool	Makes the items placed first a priority over the subsequent ones

Table 3: Advantages and disadvantages of Zoho

### **3. Sortly inventory management systems**

Users can visualize their inventory by using images rather than words on an accounting page to view it. Each item can have up to eight photographs. Users can also set up Auto Updates and Alarms, set up automated notifications to help you keep track of inventory levels, returns, and so forth. Include personalized labels and remarks.

#### **Features**

- Index – Ability to complete inventory to a beautiful, natural application and keep track of subtleties by adjusting Sortly to the user's specifications.
- Oversee - Update inventory by physically shifting things between kinds or using the Sortly app to scan QR codes/tags.
- Track - Gain a better understanding of where things are moving and what is being used by receiving alerts on low stocks and important dates.
- Report - Generate simple PDF or CSV reports that show current inventory status or previous movement.

#### **Cons**

One of the biggest flaws with this software is that it does not send out instant notifications. When specific items are pulled from stock, it does not alert the administrator. In addition, the application system's care should not be overburdened. Maintenance should not be too time consuming. It is difficult to locate assistance on a regular basis.

### **4. Cin7**

Cin7 is a fully automated point-of-sale system and inventory management system designed to meet the needs of a variety of business sizes and sectors. The platform is completely cloud-based and includes cutting-edge capabilities that help you sell and distribute your products more rapidly and efficiently. It integrates all of your inventory and allows you to

manage numerous sales channels from a single platform, providing you a greater understanding of how your stores and online sales are managed across all of your locations.

## **Features**

- Streamlines workflow: Cin7 is designed to be flexible. It ensures that stock levels match orders regardless of how or where a company stores or sells its goods.
- Financial tracking: It allows to connect goods to the most popular eCommerce apps and handle transactions through the platform.

## **Cons:**

- Limitations for customization
- Updates keep making the software buggy
- Cost of the software keeps going up more frequently

## **5. BrightPearl**

Brightpearl is a multichannel retail management solution that allows businesses to manage all of their critical processes in one location, including orders, inventory, accounting, reporting, and customer data. In addition, the app provides real-time information on client purchasing habits, profitability by SKU and channel, cash flow, inventory, and other topics.

## Features

- Capable of doing more than 20,000 orders per hour
- Provides multicurrency support
- Good information about product in hand and stocks
- Real time insight of orders that are new

## **Cons**

- Difficult to change or update single items since it works in a group of products
- Search feature is irresponsive sometimes
- Doesn't have a good customer support system

## **2.3 Literature Review**

Every day, people across the world engage in a plethora of sales transactions, resulting in a steady flow of significance that defines the character of our economies. Buying and selling things has been going on for ages, so it's only logical that an inventory management system has existed in some form or another. In most circumstances, sales refer to a transaction between two parties in which the customer receives things (physical or digital), services, or assets from the merchant in exchange for money.

According to Sheikh (2018), an organization's inventory is the supply of raw materials, partially finished goods known as work-in-progress and finished commodities it has on hand to meet its operating requirements. It is a significant investment as well as a potential source of wastage that must be carefully managed. A business's inventory is defined as a stock of goods kept on hand in expectation of possible demand. The minimum amount of inventory that must fall for an order to be placed to resupply a product.

Jonsson & Mattson (2016) explained that inventory management systems are crucial for cutting costs while increasing revenues, as well as meeting customers' requirements by guaranteeing that there is enough stock in the appropriate quantities, quality, and location. Inventory management systems must be implemented to ensure that inventory is appropriately handled. Inventory management systems relate to a set of policies and controls that manage inventory levels, analyze inventory that will be maintained, use raw materials for production, and deliver finished items.

People have been buying and selling items for ages; thus, inventory management has at the very least, always been in some manner. Obviously, there were no computers or bar code readers 300 years ago, but humans have always attempted to streamline the trading process by adopting new technologies. Inventory management is always expanding. The need for increasing efficiency and precision drives the evolution, as it does many other processes. Today, suppliers can track and manage inventory and shipments using real-time, cloud-based technologies.

According to a study done by Navaro (2012), Sales and Inventory System, a computer is a general-purpose device that may be configured to perform finite-set arithmetic or local

operations. Computers play a significant role in our society today due to technological advancements.

Technology has a great impact on our lives nowadays. Inventory, on the other hand, refers to the resources, unmanufactured commodities, and finished goods that are part of a business's ready-to-sell resources. Merchants had to keep a record of purchases and keep an eye on how many things were sold and how many were remained that day.

The proposed system will prove beneficial for the managers. According to a study titled “Monitoring and inventory for discovery mall” by Gaela & Libo (2009), The system will be responsible for physically counting products, inventories, and computing inventory summary, proper inventory management which will in turn reduce the difficulties of the manager in processing inventory. Which means that the system will keep track of commodity and product availability to eliminate understocking, overstocking, and running out of supplies.

Above is the brief introduction to the history and modern use of inventory management systems.

The following will explain about the software's and languages used for the proposed system

Plainer (2020) stated in their research paper that visual studio code began as a project with the goal of creating a code editor that could be used in the web. In terms of stability and functionality, VSCode has been constantly improved.

VSCode is a dynamic software which allows integrating multiple programming language such as Python, Java, C, C++ etc. Visual Studio Code's core feature is a lightning-fast source code editor that's ideal for day-to-day use. Syntax highlighting, bracket-matching, auto-indentation, box-selection, snippets, and more are all available in VS Code, which supports hundreds of languages. You can traverse your code with ease thanks to intuitive keyboard shortcuts, easy modification, and community-contributed keyboard shortcut mappings.

According to Gore & Singh (2021), Django is an open-source web application framework written in the Python programming language. Because of its ability to develop quickly, in today's market, Django is in high demand. Building any type of application takes less time.

The notion of service-oriented computing underpins Web Services technology. Web services are standards that link and share business operations over the network, allowing applications from various vendors, languages, and platforms to communicate with one another and with customers. Web apps are applications that are accessible using a Web browser over a network and are written in browser-supported languages (e.g., HTML, JavaScript). Web apps rely on Web browsers to run and include a variety of well-known applications such as online retail sales, online auctions, and webmail (Fedahgi, 2011)

## 2.4 Feasibility analysis

A feasibility study is essentially an analysis of a planned project plan or method's effectiveness. This is accomplished by examining aspects such as technical, economic, legal, operational, and time feasibility.

1. **Technical feasibility:** It specifies how a product or service will be delivered, including transportation, business location, required technology, supplies, and personnel.
  
2. **Economic feasibility:** The period during which a break-even financial model of the business venture is developed based on all costs associated with taking the product from idea to market and achieving sales sufficient to satisfy debt or investment requirements is known as the economic feasibility step of business development.

3. **Operational feasibility:** The capacity to use, support, and accomplish the required activities of a system or program is known as operational feasibility. Everyone who produces, operates, or utilizes the system is included. The system must meet a business need to be operationally feasible.

#### **2.4.1 Hardware requirements for the project**

Category	Type	Cost
Hardware	Computer	OMR. 500
	Internet	OMR. 35
	Peripherals	OMR. 20
Software	Microsoft Word	OMR. 10
	Microsoft Windows	OMR. 20
	Python VSCode	-
	Product license	OMR. 10
Total		OMR 595

*Table 4: Hardware requirements*

- Hardware requirements**

The primary requirement of the project is the computer where all the work required will be done.

Internet is also a necessity since the software will be a web application.

Peripherals such as mouse, keyboards and printers will be necessary to work with.

- **Software requirements**

The coding will be done on Microsoft windows platform using VSCode and python language. The web application can be developed on any platform as long as its compatible with python 3.10 and Django.

- **Technical Feasibility**

The system will be developed using tools like

- Visual studio code
- Python 3.5
- Bootstrap 4.9
- Django

These software's are free and easily available. The only requirement to run it is a modern-day web browser that can run web applications

- Economic feasibility

This system provides a better solution for the selected organization by adding the required necessities. The solution offered by this system will provide a better stock and inventory management system. The web application costs little to nothing make but can provide the organization with more benefits.

- **Operational feasibility.**

The system will be very easy to use. It does not have much hardware and software requirements. The system will be easy to use by everyone in the organization. The minimum requirement to operate the system is basic computer skills and a web browser.

# **Chapter 3: Methodology**

## **3.1. Introduction**

The primary target of the project is to provide Abu Abeer al Gawabry trading a suitable and reliable inventory management system. This system will effectively manage the inventory of the company.

The project will give the company a new system that will be used to add item category, add product, view list of products, edit the list of products with more functions such as stock in, stock out, add customer information, update customer information, banking system, expense system, sales, stocks, and reports.

To gather and evaluate user requirements to offer enough information to the researchers about what the system users want the system to do. To test and validate the developed system to verify that it meets all the system's criteria. Implementing a prototype of the designed system that achieves the system designs and gives a true taste of the actual system.

### **3.1.1 Structure of the chapter**

This chapter contains 8 parts.

Section 3.2 will contain the SWOT analysis which will help to strategically plan the benefits and the weakness of the project.

In section 3.3, a comparative analysis will also be done in a tabular format to compare the models.

The stages of the methodologies will be explained in section 3.4 and the relativity of the project with respect to the model will be explained.

It will also contain justification of project methodologies and explanation for all of them and justifying the selected methodology.

Section 3.5 will be the introduction to project planning. Every important aspect of project planning will be explained in this section. This will include tables, figures, and diagrams

Methods of data collection and analysis of the data will be done in section 3.6. The data collection method including interviews, surveys will be justified and explained.

Section 3.7 will talk about the physical requirements to move forward and develop the system required for the project. This will be explained in a tabular form.

The project design and illustration including the prototypes will be explained in section 3.8. Screenshots of the initial stages of the project will be attached.

## **3.2 SWOT analysis for methodology**

The meaning of SWOT is strength, weakness, opportunities, and threats. This method is implemented by project managers to analyze the criteria of the project with respect to the name. This helps in assessing the key objectives of the project and help to see if there is any room for improvement

- Waterfall model (Linear methodology)**

Waterfall Model was the first Process Model to be introduced. It is often referred to as linear-sequential life cycle model. It is simple to understand and execute. In this model, each step is executed before proceeding on to the next, and the stages must not coincide.

The Waterfall model is the simplest SDLC methodology for software development.

This model illustrates the software development process as a methodical flow of events. This means any phase of the development process would proceed only after the previous is done. The stages in this waterfall model do not overlap.

Strengths	Weakness	Opportunities	Threats
There is no planning required	Requirements must be known prior to development	Requirements are known	The model is highly restrictive
Is easy to apply for small projects	Progress cannot be tracked properly	Technology is easy to understand	Not economic and practical
Objectives are well defined and easily understood	Customers cannot preview the product during development	Can be implemented in similar projects	Integration is only addressed at the product
Every phase is predetermined with its input and output	Not suitable for large scale projects	Definition of the project is stable	Not applicable for complex and modern projects
Non-technical and easy to adapt	Difficulty in integration	Can be ported to a new platform	Hard to reverse errors

Table 5: SWOT analysis for Linear methodology

- **Iterative model**

The iterative process begins with a small application of a small set of software requirements and continues to develop flexible versions until a complete system is built and ready for use.

The iterative life cycle model does not attempt to start with a complete set of requirements. Instead, the development begins with the specification and implementation of a small part of the system, which will then be considered for alternatives. This process has been repeated, with each model repetition leading to a new version of the program.

Strength	Weakness	Opportunities	Threats
Deployment of ongoing functions is rapid	Resource required is more	Development can be planned parallelly	Project is highly dependent on risk analysis
Results are achieved early	Management required is high	Inexpensive for changes	Cannot provide definition of the system without increments
Risk management is easy	Not suitable for small projects	Initial operation time is less	Not suitable for changing environments
Better for large projects	Product is unknown	Risks identified from each increment can be used for the next increment	Because not all requirements are acquired at the start of the complete life cycle, system architecture or design challenges may occur.
Customer feedback is available	High skilled resources required for risk analysis	Testing and debugging is easy	More complex to manage

Table 6:SWOT analysis for iterative methodology

- **Agile model**

Agile means to something that is fast or versatile. A software development method is proposed based on iterative development is referred to as a "agile process model." Agile methodologies breakdown projects into smaller iterations or sections and try to minimize planning. The scope and requirements of the project are defined at the start of the development phase. The number of iterations, duration, and scope of each iteration are all explicitly determined ahead of time.

Strength	Weakness	Opportunities	Threats
Gives an insight to how the final product looks	Not suitable for architecture projects	High collaboration between customer and stakeholders	Lack of predictability
Increases productivity due to iterations	Difficult to work with in large projects for large organizations	Detection of problems is easy	Difficult to pin down problems
It is adaptive	The team should be present together to work	There is more room for improvement	Keeping engagement between everyone to make it work
More flexible	Limited project planning and tracking	More transparent which helps customers and stakeholders	Record keeping is difficult
Delivery is rapid	Documentation is limited	Feedback is immediate	Doesn't follow a strict schedule and project can go wrong if not followed properly

Table 7: SWOT analysis for agile methodology

### 3.3 Comparison of models under each methodology

Here the best model from each methodology will be compared and the most suitable model for the development of this project will be selected

V-Shaped (Waterfall)	Spiral Model (Iterative)	DSDM (Agile)
Feedback from user is unavailable	Feedback from user is unavailable	Feedback from user is available
Cannot be changed once the project has initiated	Can be changed once the project has initiated	Can be changed once the project has initiated
Very low predictability	Very low predictability	High predictability
Easy to understand	Average to understand	More complex
Basic usability skill required	Average usability skill required	Most used model
Cost is low	Expensive	Very expensive
No customer priority	Average customer priority	High customer priority
Resource organization is available	Resource organization is not available	Resource organization is not available

Table 8: Comparison of methodology

From the above comparison, it is fair to say that DSDM methodology will be the best model for this web application development

#### 3.3.1 Justification of methodology

Dynamic Systems Development Model (DSDM) has been selected for the project. DSMD focuses more on the aspect of the projects including the satisfaction of the stakeholders and the customer. The project environment mandates a focus on the broader business goal as well as all elements of the solution that develops to fulfill that need. DSDM has a long history of delivering successful Agile projects in a variety of organizational situations, and has proven to be entirely scalable, functioning efficiently in small, simple organizations, big, complicated organizations, and highly regulated environments. It's also been proved to work equally well for IT and non-IT projects, such as business change initiatives.

## **3.4 Application of methodology**

### **3.4.1 Stages of the methodology**

The methodology of DSDM for agile software development that is supported by the user's continuous interaction in an iterative and progressive development. It's a well-defined conceptual and technological support framework, generally consisting of actual objects or software modules, that may be used to organize and develop.

The stages of the methodology are as follows

#### **1. Pre-project phase**

Pre-project meetings take place at the executive level, when business challenges are discovered, applications are chosen, these applications are prioritized, a budget is set aside, and team building begins.

The pre-project phase guarantees that only the most acceptable projects are initiated and set up appropriately. The first project planning for the feasibility study is completed once it has been confirmed that a project will go forward, that finance is available, and so on. The feasibility study kicks off the project properly.

The feasibility and business studies are carried out one after the other. They provide the ground rules for the remainder of the development process, which is iterative and incremental, and they must be finished before any additional work on a project can begin.

#### **2. Project life cycle phase**

This includes

##### **a. Feasibility study**

The feasibility of developing the application is evaluated during this phase, and decisions are taken appropriately. It considers the available team, the budget, the required functionality, and the potential of implementing the functions within the resources available. This study's output includes a model (or a prototype) and reports that detail how all of the feasibility criteria were satisfied.

### **b. Business study**

The comprehensive business analysis of the intended system is completed in this phase. The system's information needs are identified, and the business requirements are described at a high level. Once this is completed, the desired system's fundamental architectural structure is ready. The team investigates the project's business elements.

### **3. Functional model iteration**

This is one of the life cycle's two iterative stages. The major goal of this phase is to iteratively create the prototype and obtain feedback from users to extract the intended system's needs.

The requirements obtained in earlier steps are incorporated into Functional Models. To achieve so, functional prototypes of the requirements are generated to show the user how the program will perform.

The prototype is refined by demonstrating it to a user, receiving feedback, and making modifications as needed.

### **4. Design build and iteration**

The major goal of this phase is to enhance and improve the functional models created in the previous phase so that they completely meet the demands of the user. To do this, prototypes of the initial model will be created.

The software components created during functional modeling are fine-tuned until they fulfill a certain standard. The result of this step is a thoroughly tested system that is ready for use.

## **5. Implementation**

Ultimately, in the implementation phase, users check that the prototypes meet their criteria, and the implementation, as well as the training of future users so they can operate the program, takes place.

End-user feedback is obtained on a regular interval to maintain that business expectations are satisfied and that the perfect solution is provided to meet the end users' needs.

### **3.4.2 Describing the application of the methodology to the system of the current project**

#### **1. Feasibility and business study**

A feasibility study was conducted to ensure the project is viable and to justify that the project is economically feasible.

All the hardware and software requirements of the project were evaluated alone with a cost estimation study and an operational feasibility study.

The results showed that the system is very feasible

#### **2. Functional model iteration**

Initial prototypes of the system have been created and feedback from the users have been taken in the form of questionnaires, surveys, and interview.

#### **3. Design build and integration**

The initial prototypes that have been created and provided to the organization. Continuous review of the system

#### **4. Implementation**

The project is implemented after following all the criteria which make sure the web application is ready for deployment after making sure it passes all the criteria required

## 3.5 Project Planning

### 3.5.1 Introduction to project planning

A project plan, also known as a project management plan, is a document outlining how a project will be followed through, monitored, regulated, and finalized. This document outlines the program objectives and scope, and it serves as an official guideline for the project team, the larger organization, and stakeholders.

It is a compilation of multiple diverse documents that is generated throughout the project planning phase. It's more than just a schedule or a task list, although both elements are included. The project management plan is formally established at the beginning of the project and then adjusted as necessary throughout its lifetime.

### 3.5.2 Communication plan

A communication plan is a framework for how conveying important information will take place with ongoing project information to key stakeholders in project management. The communication strategy will assist the team in deciding who should receive warnings and when to inform project participants. The team will explain which channels participants should use and when in the communication strategies, as well as how often different information should be provided and who should respond to each channel.

Goal	Tool of communication	Audience	Frequency
Project review	In person meeting, email	Project supervisor Stakeholders	Weekly
Testing project	On campus meeting	Project manager Project supervisor Stakeholders	Weekly
Document submission	Online	Project supervisor	Weekly
Review the system	On campus meeting	Project supervisor	Weekly
Project updates	Email	Project supervisor	Weekly

Table 9: Communication plan

It is very important to approach and communicate with stakeholders regarding information about the project. This makes sure the project is viable and makes sure it can be deployed without any setbacks

### 3.5.3 Resource plan

Project managers employ a resource management strategy to manage their resources. A resource management strategy is often used to handle the most crucial resource in any project

Each resource is allocated a job and duties when the project manager creates a resource management strategy. It is vital to stress, however, that team members should be included in the planning process. This permits resources to be engaged and can bring project insight that might otherwise go unnoticed by someone who isn't a subject matter expert.

Resource	Type	Functionality of resource
Hardware resource	Personal Computer	Backbone of the project. used for every important and necessary task
	Internet	Required to find necessary information to make the project possible
	Storage space	Required to save all the necessary files
Software resources	Microsoft Visual studio code	For making the project and coding purposes
	Microsoft word	Required to make the report
	StarUML	Tool used to make system diagrams
	Python 3.5	Front-end coding
	Microsoft PowerPoint	To create presentation

Table 10: Resource planning

### **3.5.4 Risk management plan**

Risk is defined as an occurrence that has a chance of occurring and this may have a direct or indirect effect on a project if it ever does occur.

Risk management is a continuous process that can last the length of the project. It entails risk assessment planning, diagnosis, evaluation, measurement, and schedule predictability. Many of these procedures are adjusted as attack vectors are recognized over the lifecycle of the project. The aim of risk management is to reduce the probability and impact of occurrences that are unfavorable for the project. On the other hand, any incident that has the potential to add value should be taken advantage of.

<b>Risk</b>	<b>Type of risk</b>	<b>Chance of occurring</b>	<b>Impact</b>	<b>Mitigation strategy</b>
Project Failure	Project deferral risk	Low	High	Implement better project planning strategy
Project exceeds cost	Cost risk	Low	Medium	Examine cost benefit again and make sure it doesn't exceed requirements
Time limit exceeds	Time risk	Low	High	Follow proper time management
Technological risks	Technological Risk	High	High	Use up to date software's
Low client involvement	Stakeholder risk	Low	High	Organize meetings with client

*Table 11: Risk management plan*

From the risk management plan, it is evident that the proposed web application is a low-risk project.

### 3.5.5 Work breakdown structure (WBS)

A typical productivity tip for making the work more reasonable and approachable is to break it down into smaller tasks. The Work Breakdown Structure (WBS), which is one of the most important project management tools, is the instrument that utilizes this approach for projects. It incorporates scope, cost, and schedule baselines on its own, guaranteeing that projects are in track.

Task Name	Duration	Start	Finish	Predecessors
<b>Design and implement a inventory management system</b>	<b>113 days</b>	<b>Fri 10/15/21</b>	<b>Tue 3/22/22</b>	
<b>Pre-project phase</b>	<b>12 days</b>	<b>Fri 10/15/21</b>	<b>Mon 11/1/21</b>	
Project overview	3 days	Fri 10/15/21	Tue 10/19/21	
Scope of project	2 days	Wed 10/20/21	Thu 10/21/21	3
Aim of project	1 day	Fri 10/22/21	Fri 10/22/21	4
Objective of project	1 day	Mon 10/25/21	Mon 10/25/21	5
Stakeholder analysis	2 days	Tue 10/26/21	Wed 10/27/21	6
Data collection	3 days	Thu 10/28/21	Mon 11/1/21	7
<b>Feasibility study</b>	<b>16 days</b>	<b>Fri 10/15/21</b>	<b>Fri 11/5/21</b>	
Literature review	2 days	Fri 10/15/21	Mon 10/18/21	
Problems faced	2 days	Tue 10/19/21	Wed 10/20/21	10
Feasibility analysis	3 days	Thu 10/21/21	Mon 10/25/21	11

## 3.6 Data collection and analysis

### 3.6.1 Describing data collection methods

The procedure of obtaining, evaluating, and analyzing precise findings for study using conventional approved procedures is known as a data collection. Based on facts collected, a researcher can analyze their hypothesis. Regardless of the topic of investigation, data collecting is typically the first and most crucial phase in the research study.

two methods of data collection were used for this study

- Interview- An interview is defined as a formal chat between two or more people in which questions are asked of a person in order to obtain the needed responses or answers (wisestep,2020)

The interview process allows the interviewee to get more information from a personal perspective of the employees and manager of the company. This helps in retrieving details that cannot be retrieved from any other data collection methods. This gives an accurate screening because the process is completely face-to-face.

- Survey- A survey is a method of research that is used to collect data from a group of members who are willingly ready to give responses.

### **3.6.2 Justification of data collection methods**

- **Interview**

Interview helps in understanding the requirements of the client in real time and can provide much information possible

An interview is defined as a formal chat between two or more people in which questions are asked of a person in order to obtain the needed responses or answers (wisestep,2020)

Objectives of interview is to get a deeper understanding of the primary users of the system who are the managers and the employee of the system. This makes sure that the system can fulfill all the requirements that the company needs

- **Survey**

Survey helps in getting the opinions of the employees and the general people in term of what is better for the project and system that is being developed and gives an idea on how the system should be made. This makes sure the web application will full fill the requirements of the users of the system. The survey included questions about the current system in place as well as the requirement purpose of a new system. A few personal questions were also asked to the respondents. Questions asked also included the security systems of the current system and usability of the system. Most of the replies justified the implementation of a new web-based inventory system.

### 3.6.3 Presenting the findings

- Interview

An interview was conducted at the site of the company. They were not currently satisfied with the current inventory management system they had. It was primarily conducted to provide an insight on what the system was supposed to be practically and visually. Which in turn gives a better understanding of the project.

- Survey

Q1) The first question in the survey, 22 responses were submitted

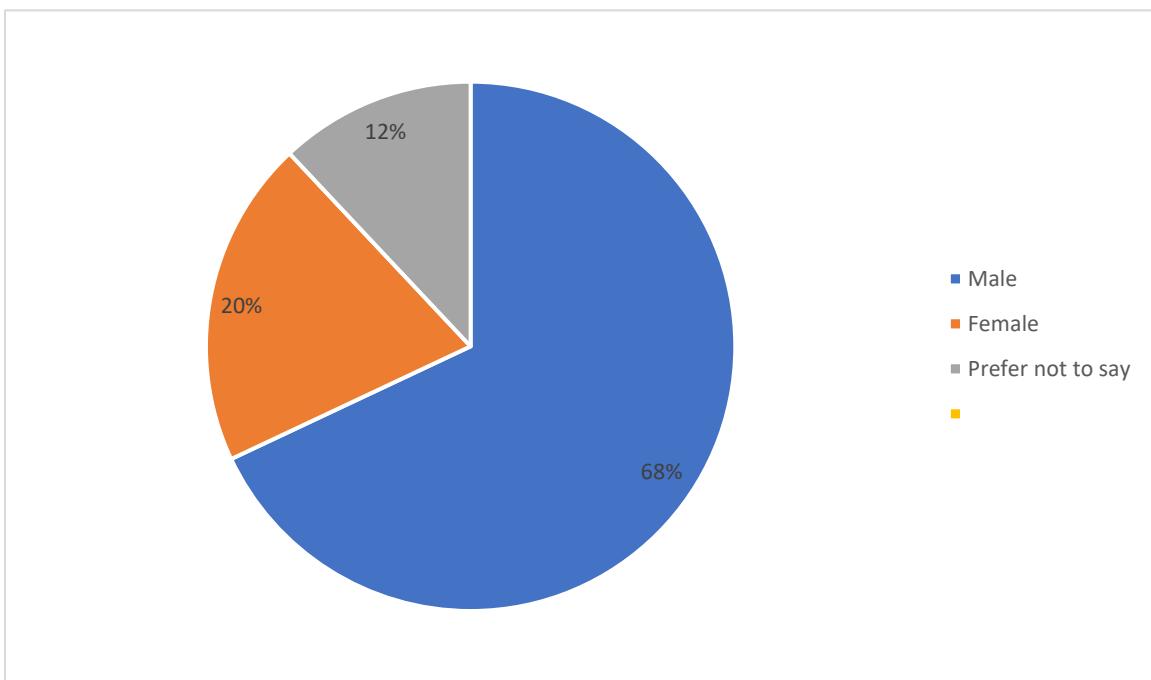

Figure 5: Survey data visualization

From the data provided by the responses, 68% of them were male, 20% were females and 12% prefer not to say

Q2) They second question asks about the experience with inventory management systems.

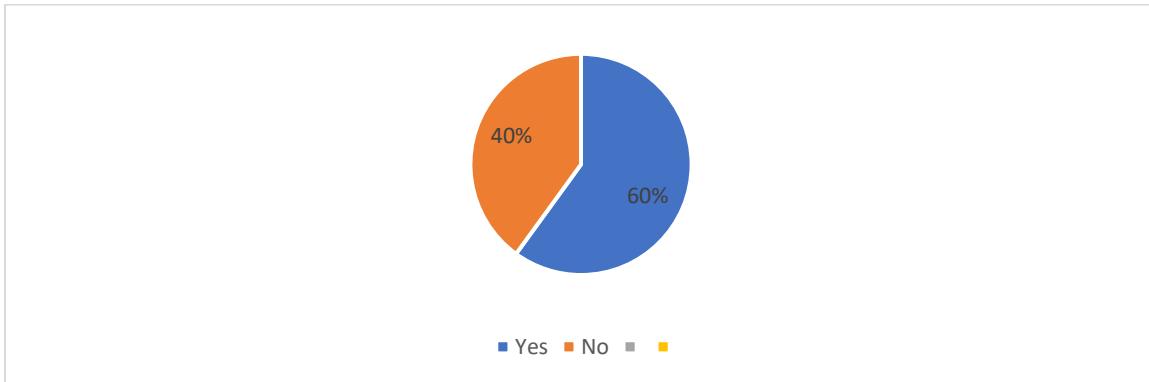

Figure 6: Survey data visualization 2

20 responses were acquired from this question, 60% of them are experienced with inventory management system whereas 40% don't have any experience with it.

Q3) The third question ask the users to rank the system in place. 20 responses were received

1- Very satisfied and 5- Unsatisfactory

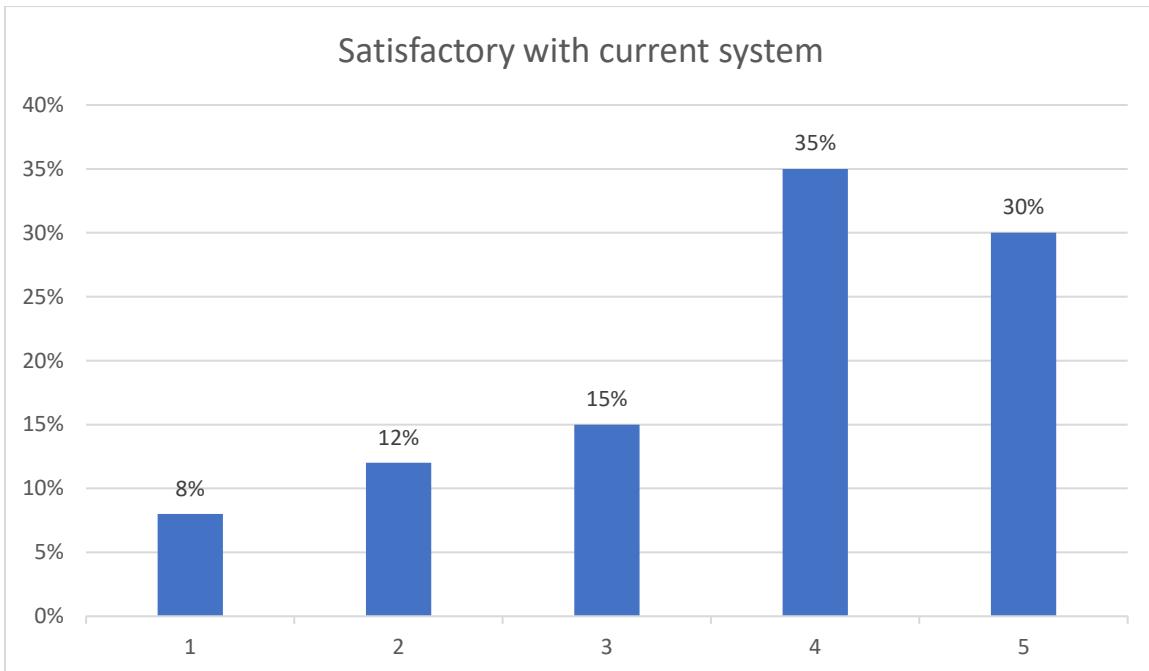

Figure 7: Survey data visualization 3

From the above information, it is very evident that more people are unsatisfied with the current system that is in place in total, 65% of the users are not happy with the current system and only 8% are very satisfied with it which is a very small number.

Q4) The fourth question is based on the security issues on the current system

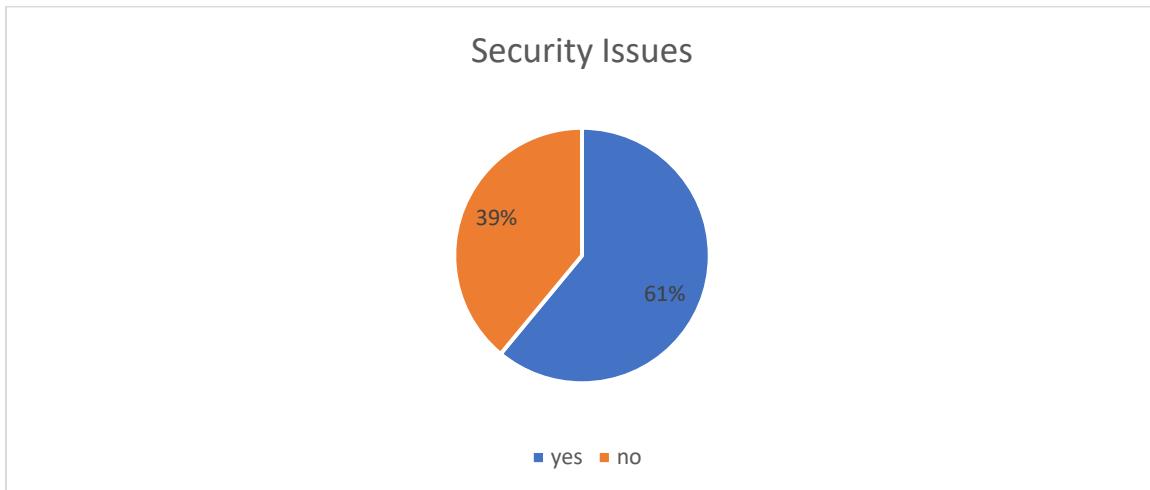

Figure 8: Survey data visualization 4

From the data gathered, 61% of the users feel there is a security concern from the current system that is used which shows it needs security improvement

Q5) The fifth question is based on the usability of the current system and to see if the users find any hardships in using it

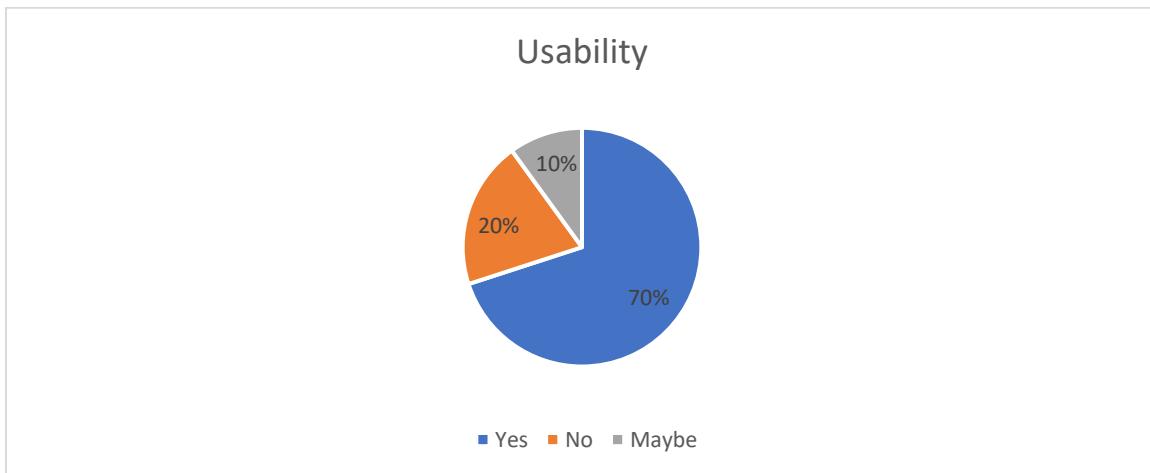

Figure 9: Survey data visualization 5

From the above results, 70% of the users find the current system complicated only 20% are satisfied with the current system

Q6) The sixth question asks the users if they want a better system which is superior than the current one

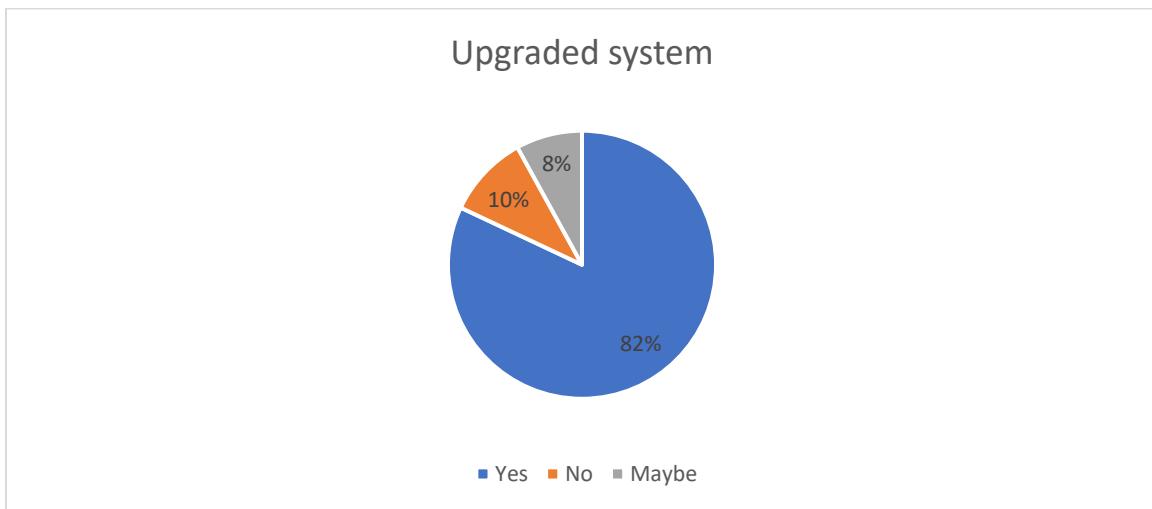

Figure 10: Survey data visualization 6

Q7) The seventh question ask about the user difficulty with the current system

1- Is very hard and 5 is very easy

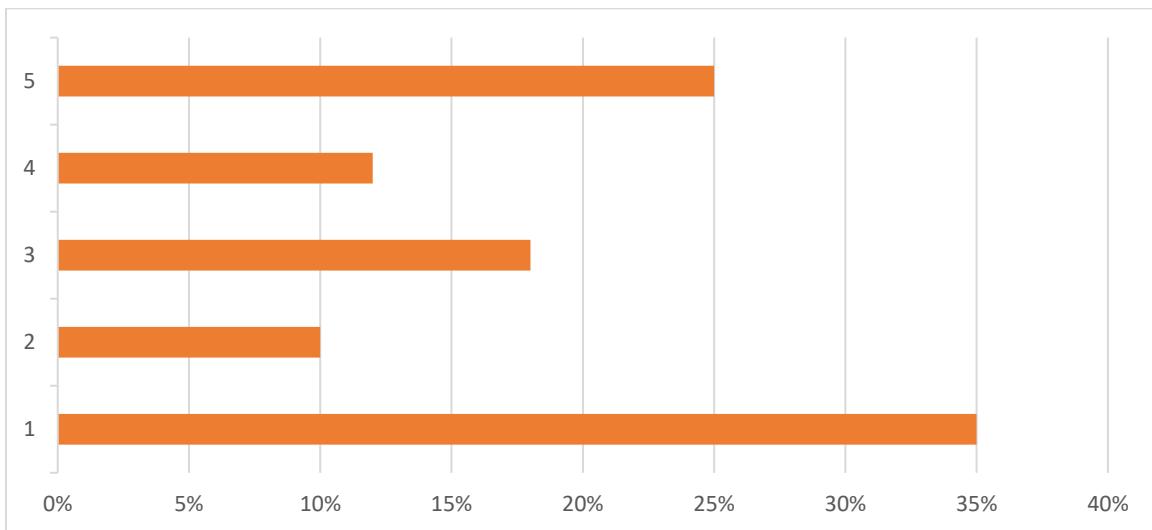

Figure 11: Survey data visualization 7

From the above visualization, majority of the user find the current system hard to use. Only 25% of the find it very easy to use but there are more people who have a difficulty in using it.

### **3.6.4 Interpreting the findings**

From the statistics and data provided above, it is clear that the users require a better and enhanced system that upgrades the current system.

Most of the responses recorded were in favor of a new system. The proposed system will prove highly beneficial for the users of the system.

## **3.7 Requirements**

### **3.7.1 External interface requirements**

In order to make the web application, there a few external interfaces required.

Sr.no	Interface	Requirement
1	User interface	<ul style="list-style-type: none"><li>• Pc</li><li>• Laptop</li><li>• Monitor</li><li>• Browser</li></ul>
2	Software interface	<ul style="list-style-type: none"><li>• VS Code</li><li>• Bootstrap</li><li>• CSS</li><li>• HTML</li><li>• Browser</li></ul>
3	Hardware interface	<ul style="list-style-type: none"><li>• PC</li><li>• Hard disk</li><li>• Mouse</li></ul>
4	Communication	<ul style="list-style-type: none"><li>• Internet</li></ul>

Table 13: External requirements

### **3.7.2 Functional requirements**

A Functional Requirement is a document that explains the function that the software need to provide. It refers to the software system or a subsystem of one. A functionality is nothing but the resources, actions, and results of a software application. A calculation, manipulation of data, business activity, interactivity, or any other specific functionality that defines what function a process is supposed to perform can all be included.

<b>Requirement ID</b>	<b>Requirement: The following requirements should be able to be working for the system to be functional from all aspects</b>
FR-001	The system should take in the appropriate login information
FR-002	The employees and admin should be able to add categories of product, Add product, and view a list of products they can update and add stock
FR-002	Employee and admin should be able to add customers, update customer details and input customer ledgers
FR-003	Employee and admins should be able to enter bank details, add credit and debit amounts and update them.
FR-004	Employee and admins should be able to add the list of sales expenses to the system and can delete it.
FR-005	Employee and admins should be able to create and download invoice.
FR-006	Purchases made should be able to get accepted as cash or invoice
FR-007	Daily and monthly logs of stock should be shown in a tabular format
FR-008	Monthly reports should be visualized in a sales graph
FR-009	Users who are logged in should be able to logout
FR-010	Admin should be able to access their functions

*Table 14: Functional Requirements*

### 3.7.3 Security Requirements

Requirement number	Requirement Description
SR-001	Only the admin can add employees
SR-002	Django password hash should be working
SR-003	Backend which includes personal information can only be manipulated by admin
SR-004	User password should be strong
SR-005	Cannot be breached

Table 15: Security requirements

## 3.8 Illustrations

### 3.8.1 Data flow diagrams

A data flow diagram (DFD) illustrates how information flows through a process or system. It shows input data, output, storage facilities, and pathways between each destination utilizing predefined symbols.

#### 3.8.1.1 Level 0 DFD

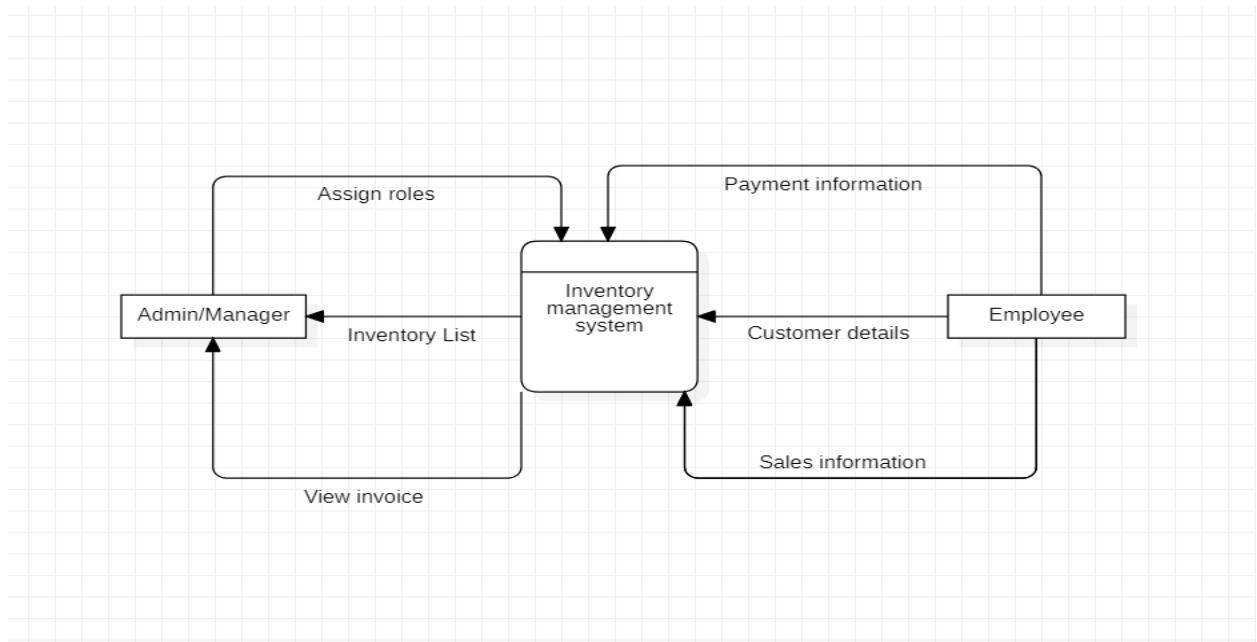

Figure 12: Context diagram/Level 0 DF

### 3.8.1.2 Level 1 DFD

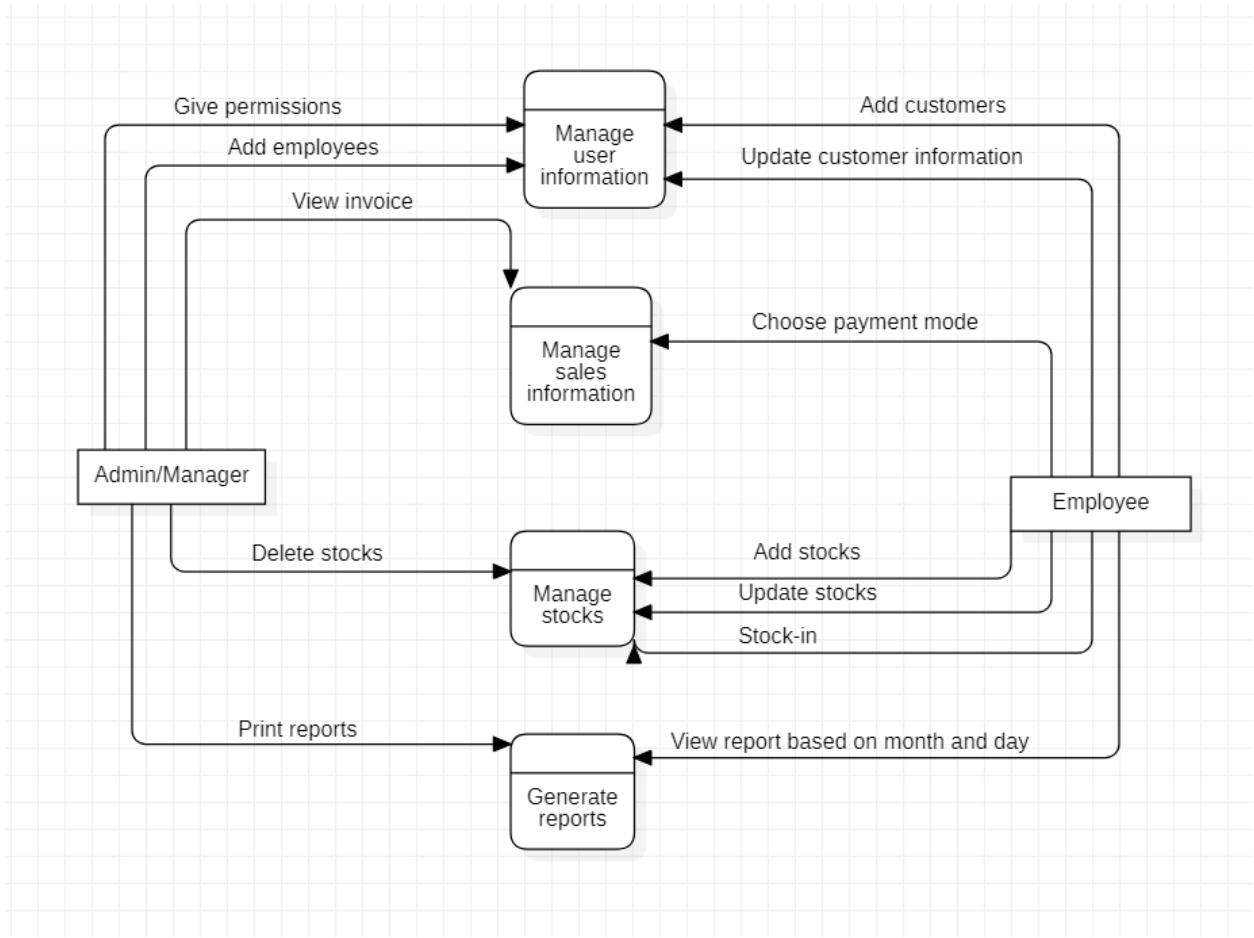

Figure 13: Level 1 DFD

### 3.8.3 System flowchart

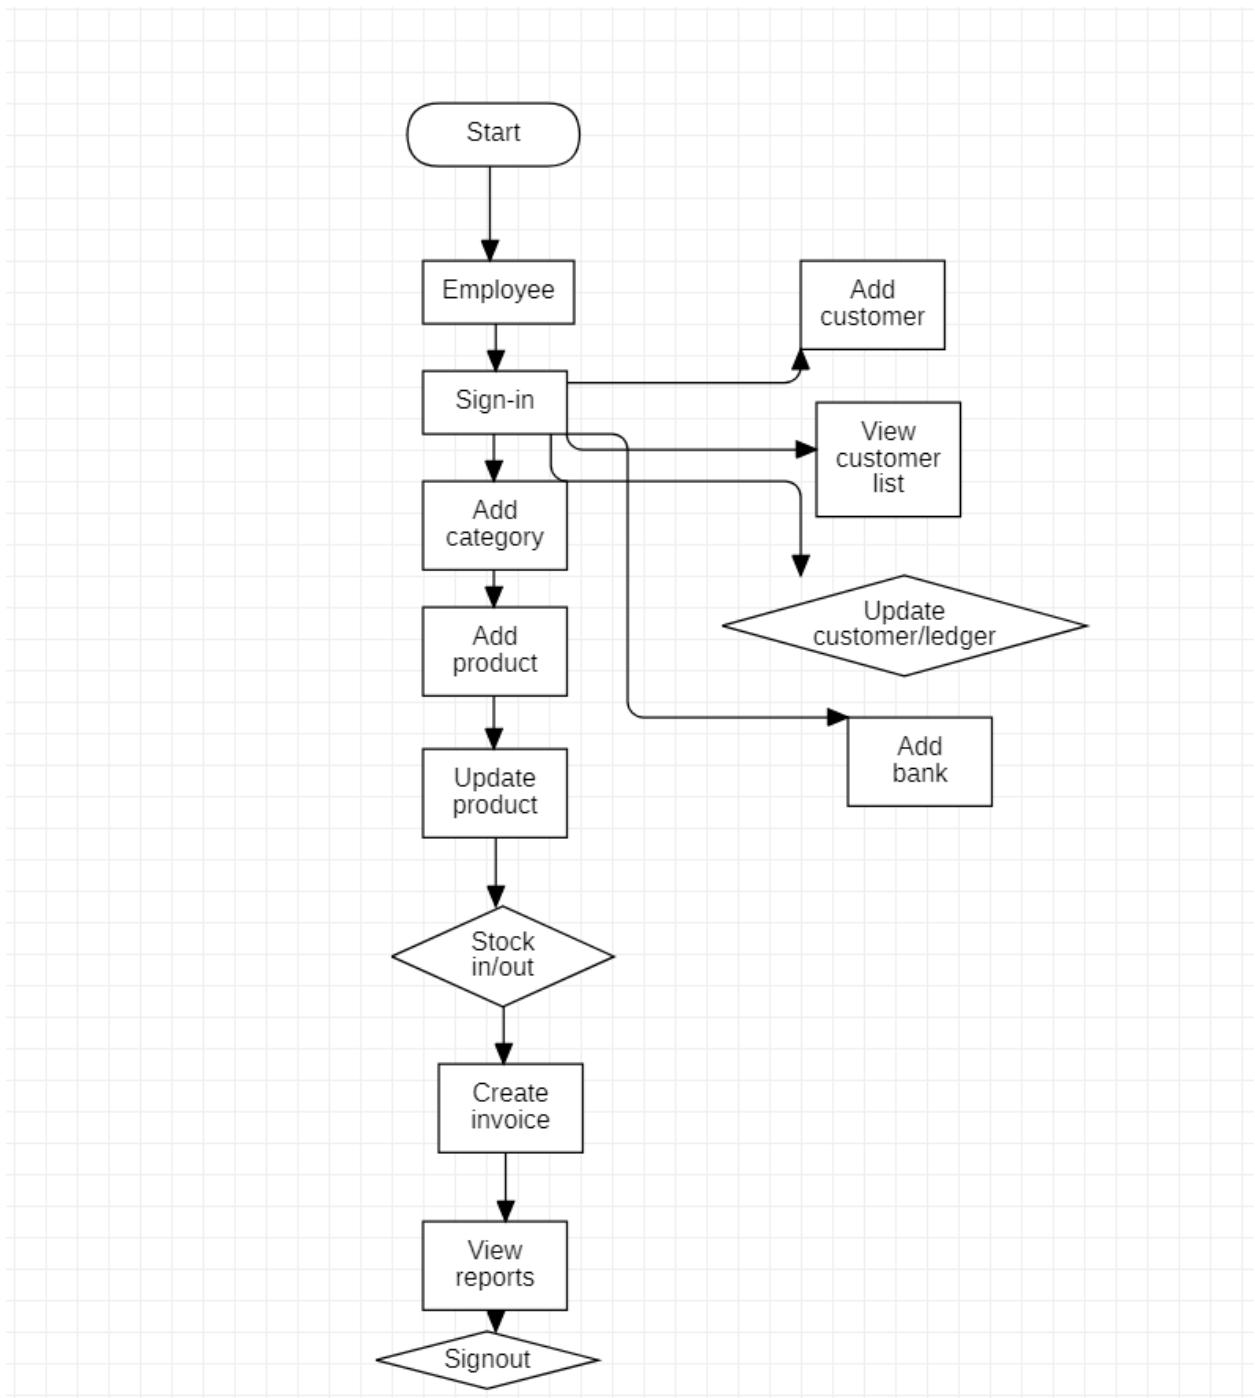

Figure 14: System flowchart

### 3.8.4 Entity relationship diagram

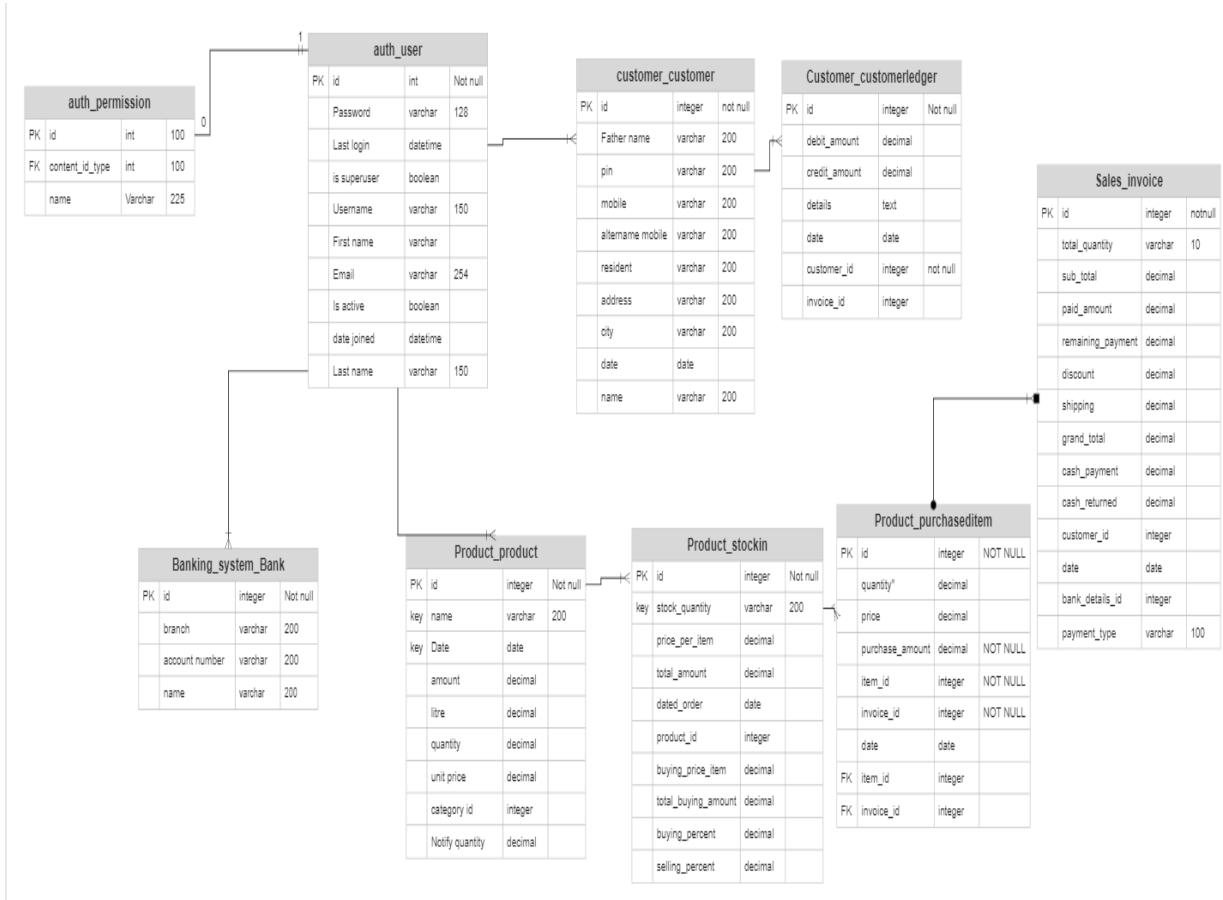

Figure 15: ER Diagram

### 3.8.5 class diagram

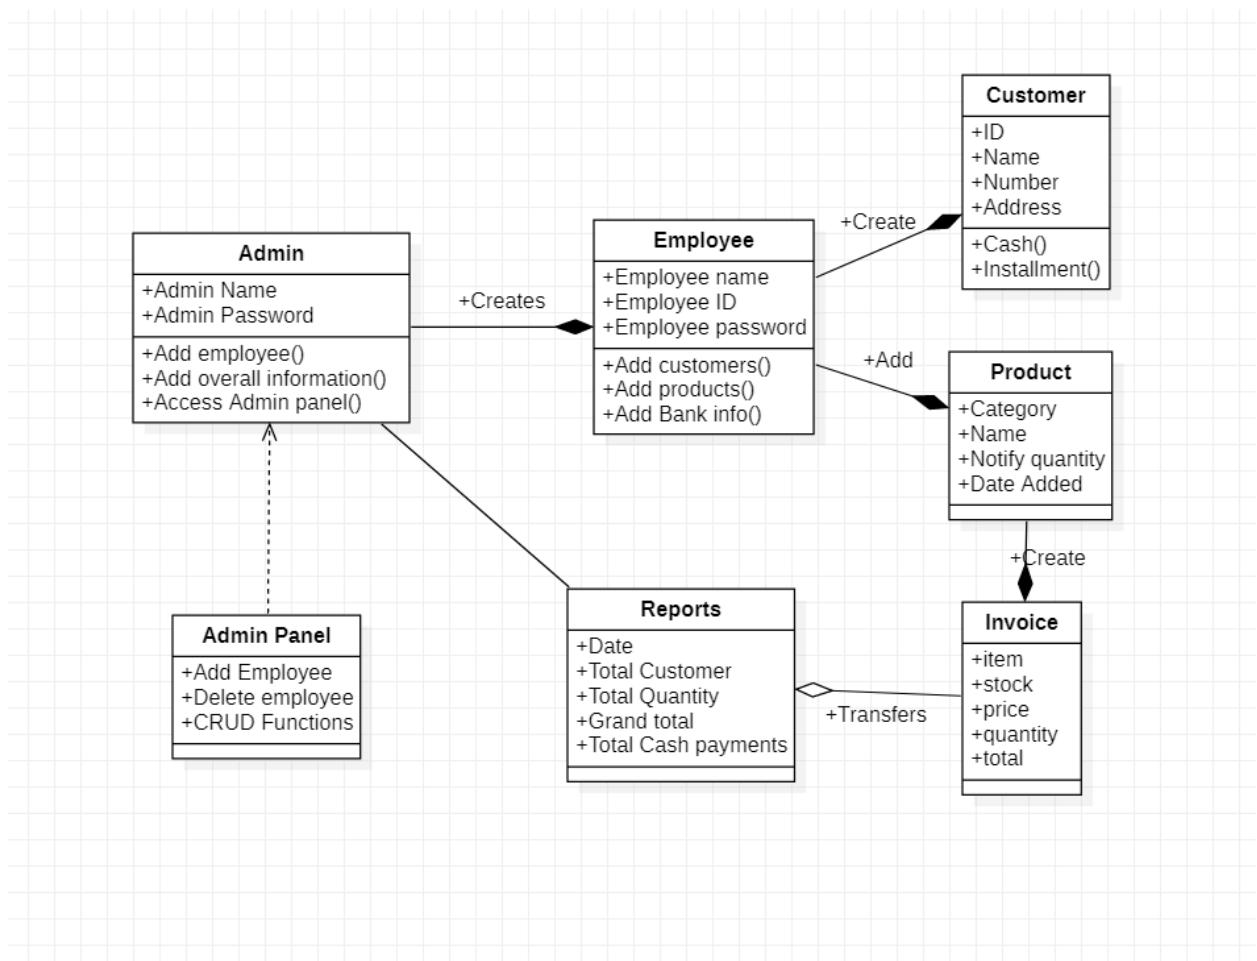

Figure 16: Class diagram,

### 3.8.6 Use case diagram

A use case diagram is a visual representation of the characteristics of a system and its users. It is often represented as a graphic representation of interactions between the various parts in a system. Use case diagrams illustrate the activities that happen in a system and how they flow, but they do not specify how certain events are handled.

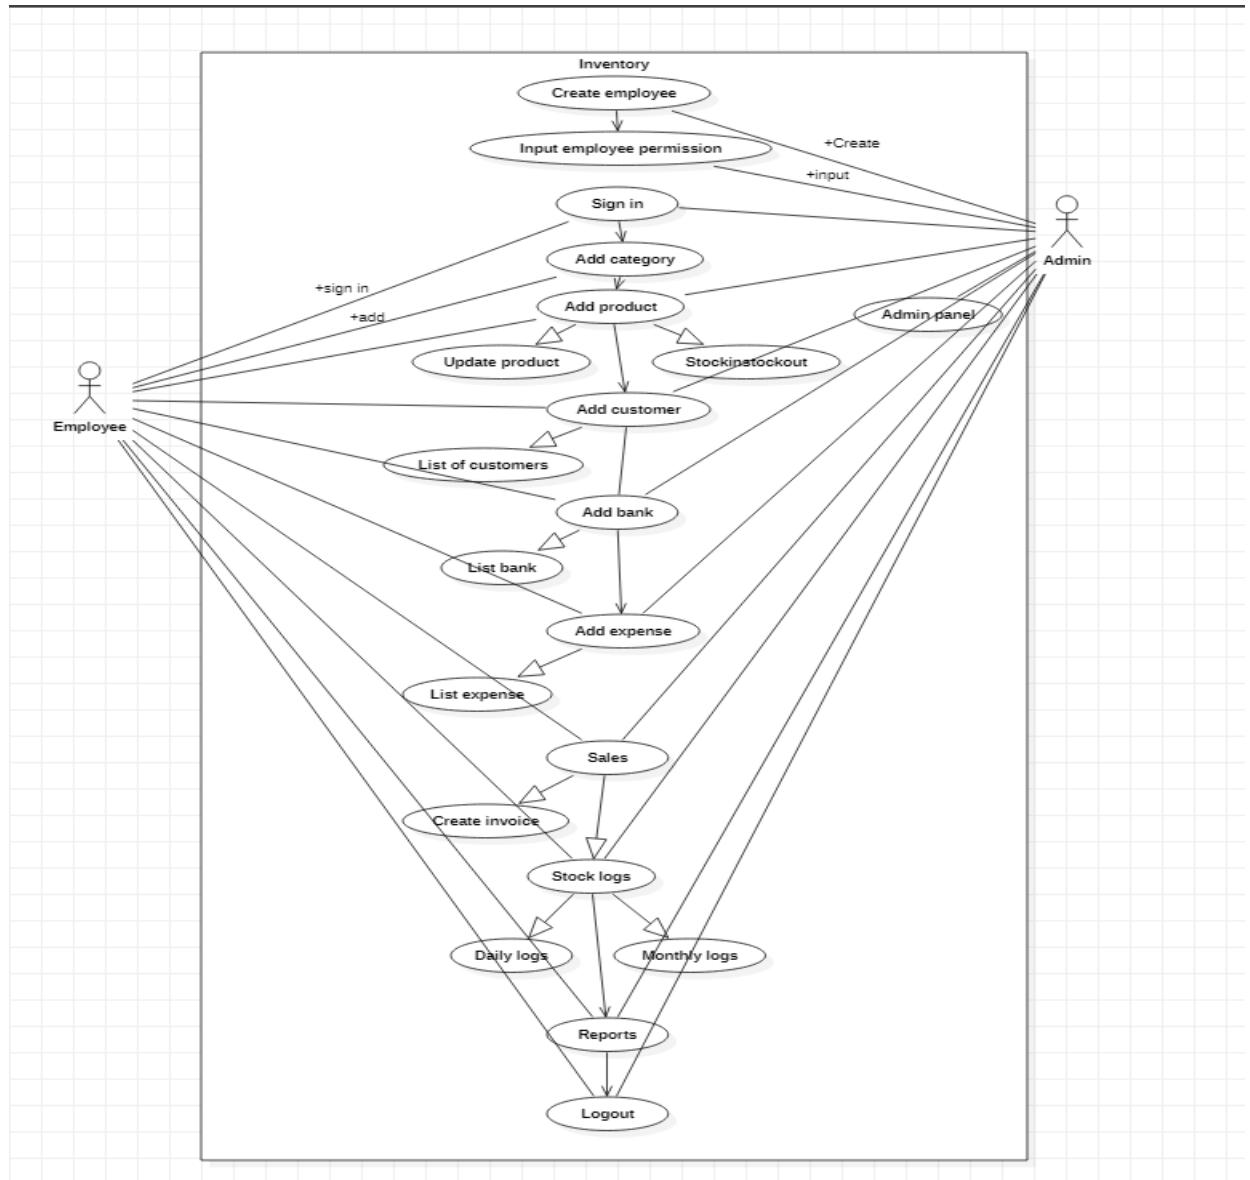

Figure 17: Use case diagram

### 3.8.6.1 Sequence diagram

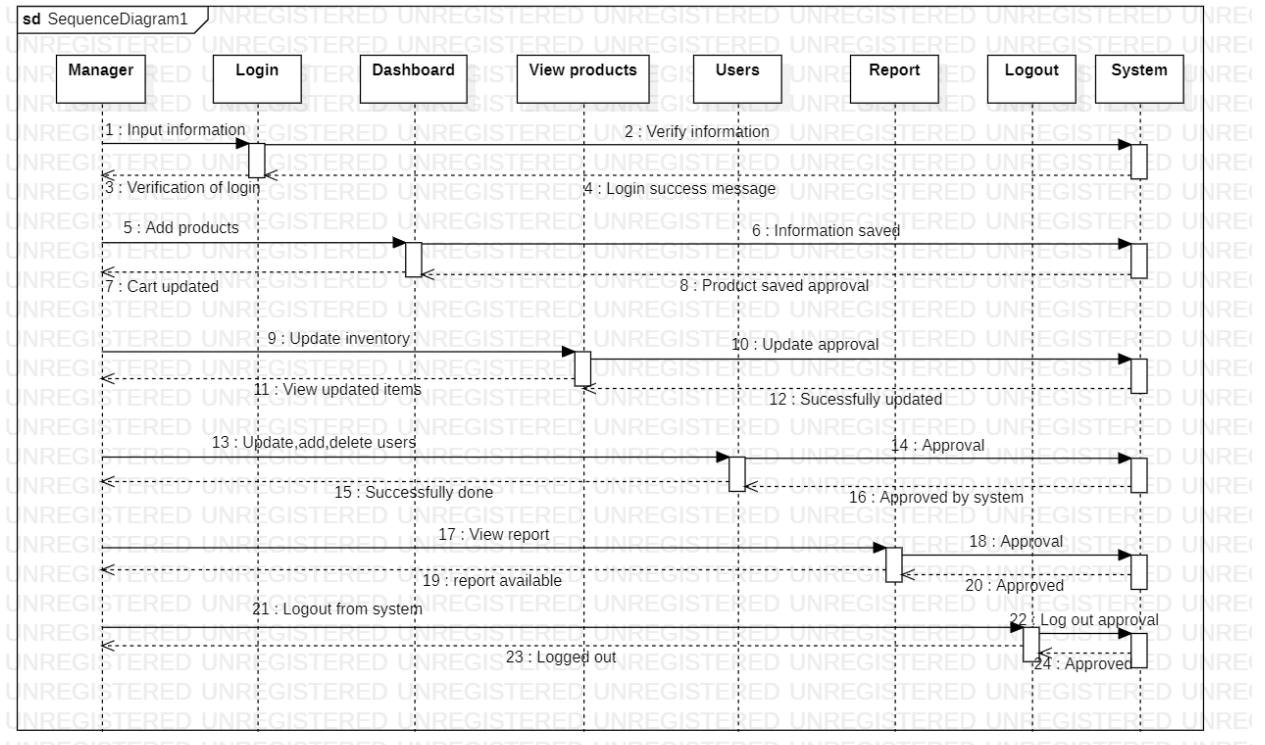

Figure 18: Sequence diagram

## 3.9 Initial prototype

### 3.9.1 Login UI

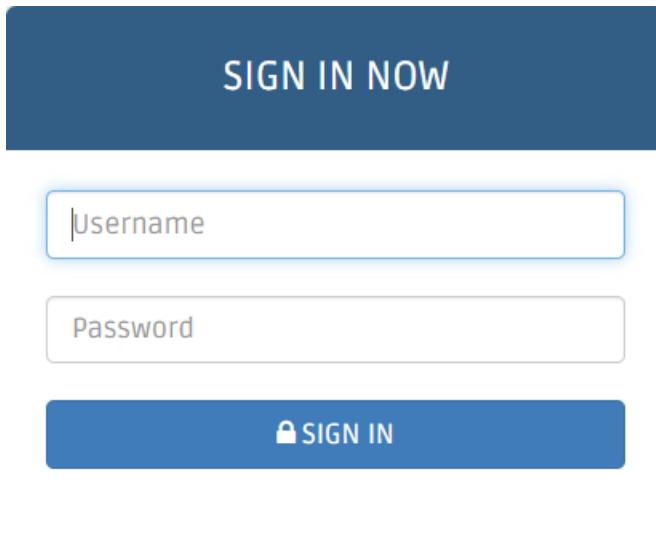

Figure 19: Login UI

This is the initial login UI. It does not contain any logos or any special features. This will be updated when the system gets an update.

### 3.9.1 Add category page

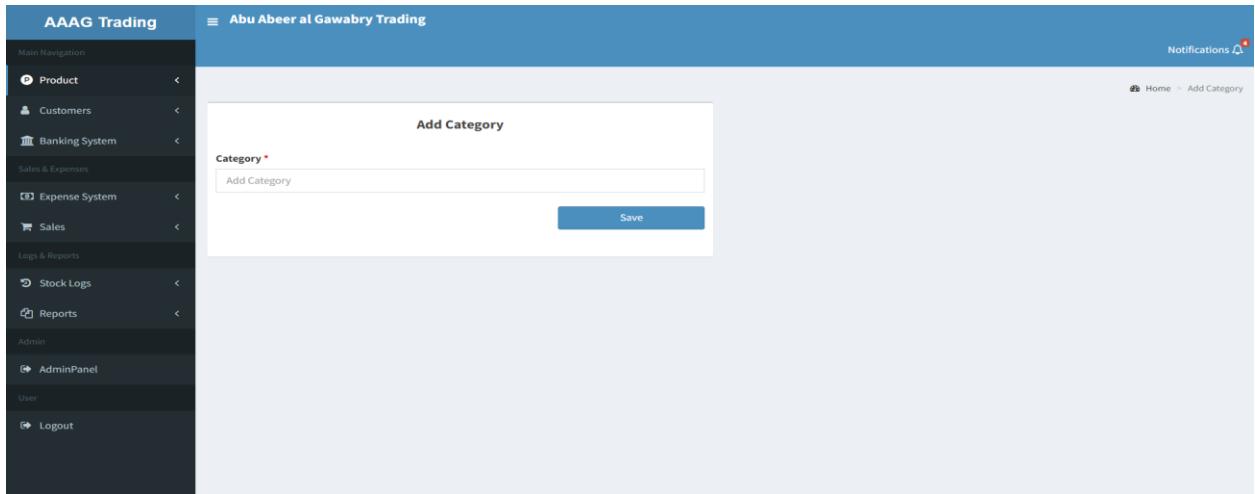

Figure 20: add category

This is the add category page. The templates do not have any CSS or animations, yet which will be added.

# **Chapter 4: Design**

## **4.1 Introduction to chapter**

This chapter will talk about illustrating the system which will include an updated use-case diagram with use-case specifications, test case, class diagram, sequence diagram, ER diagram.

The tables and views in the application will be explained. Methods to protect the data will also be included.

Screenshots of all the pages and explanation of each page will also be added.

The different designs of the system will be further explained based on the updated system after the system has gone through some changes

Section 4.2 will illustrate the designs, 4.2.1 contain the use case diagram of the system

4.2.2 contains the flowchart of the system along with the explanations

4.2.3 contains the sequence diagram.

The use case specification of the login function is in section 4.2.4

Section 4.2.5 contains the entity relation ship diagram which shows the relationship between different tables

Section 4.3 contains the data dictionary. It shows the structure of the tables present in the database.

Section 4.4 explains the purpose of using the diagrams

Section 4.5 contains the screenshot of each page.

## 4.2 Illustrating the design

### 4.2.1 Use case diagram

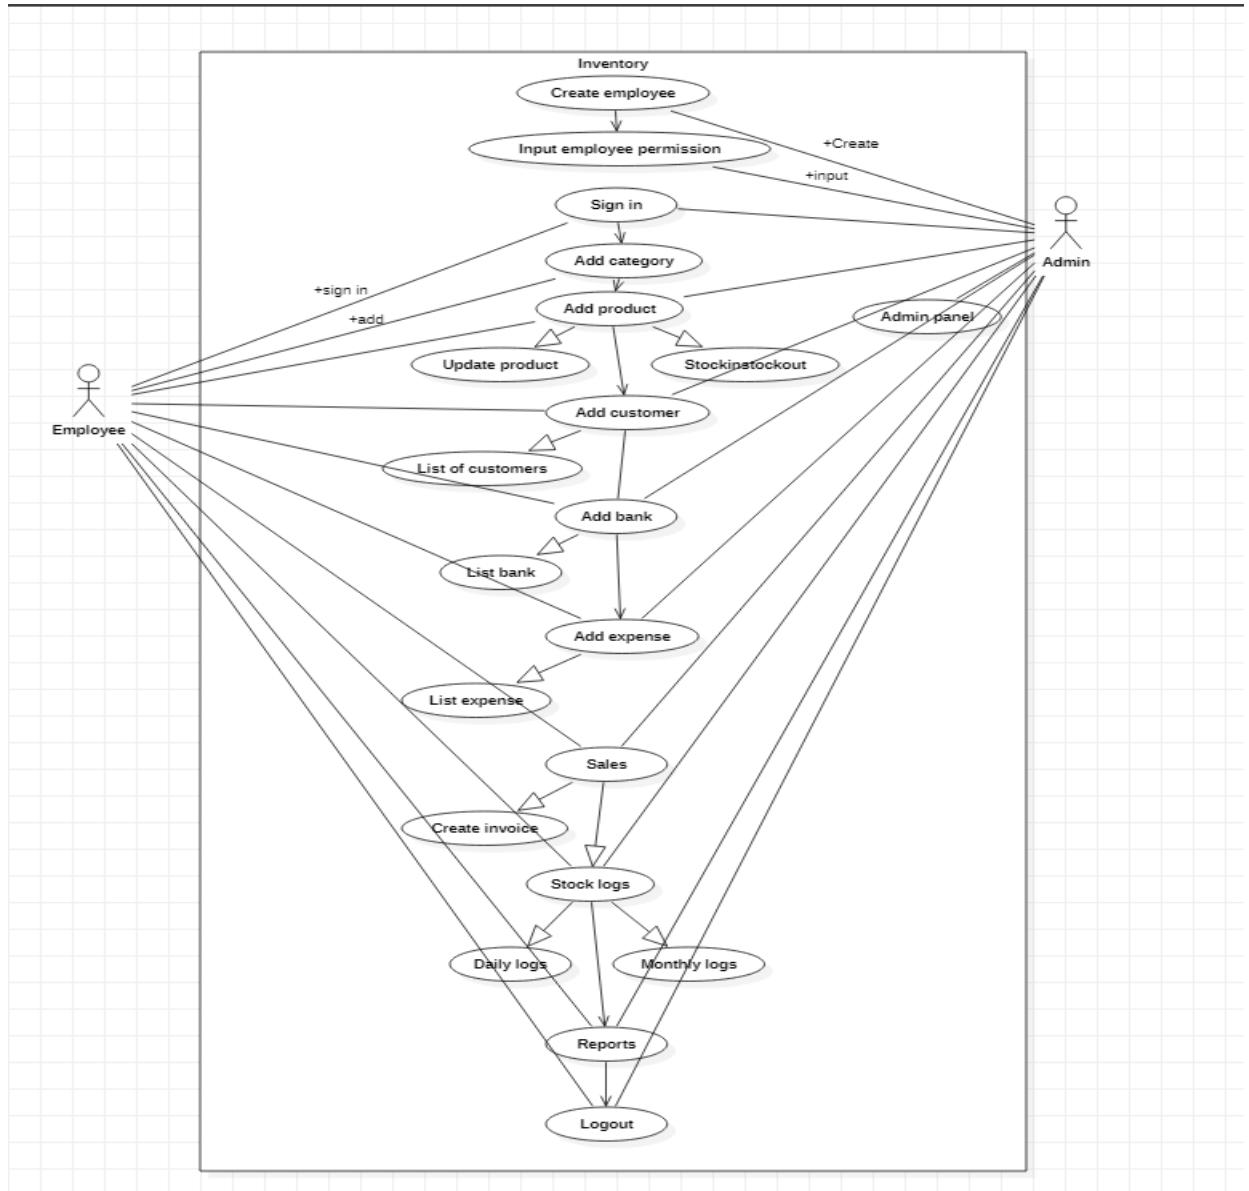

Figure 21: Use case

The above use-case diagram gives a brief description of the exterior working of the system the two actors are employees and admin/manager. The use case starts when the admin creates an employee and finalizes the permissions of the employee. They both can add categories, products and perform most of the same actions such as adding bank, viewing

the bank list, adding expenses, and viewing the expense list, list of stocks and logs, report and logout. Only the admin can assign privileges and access the admin page

#### 4.2.2 System flowchart

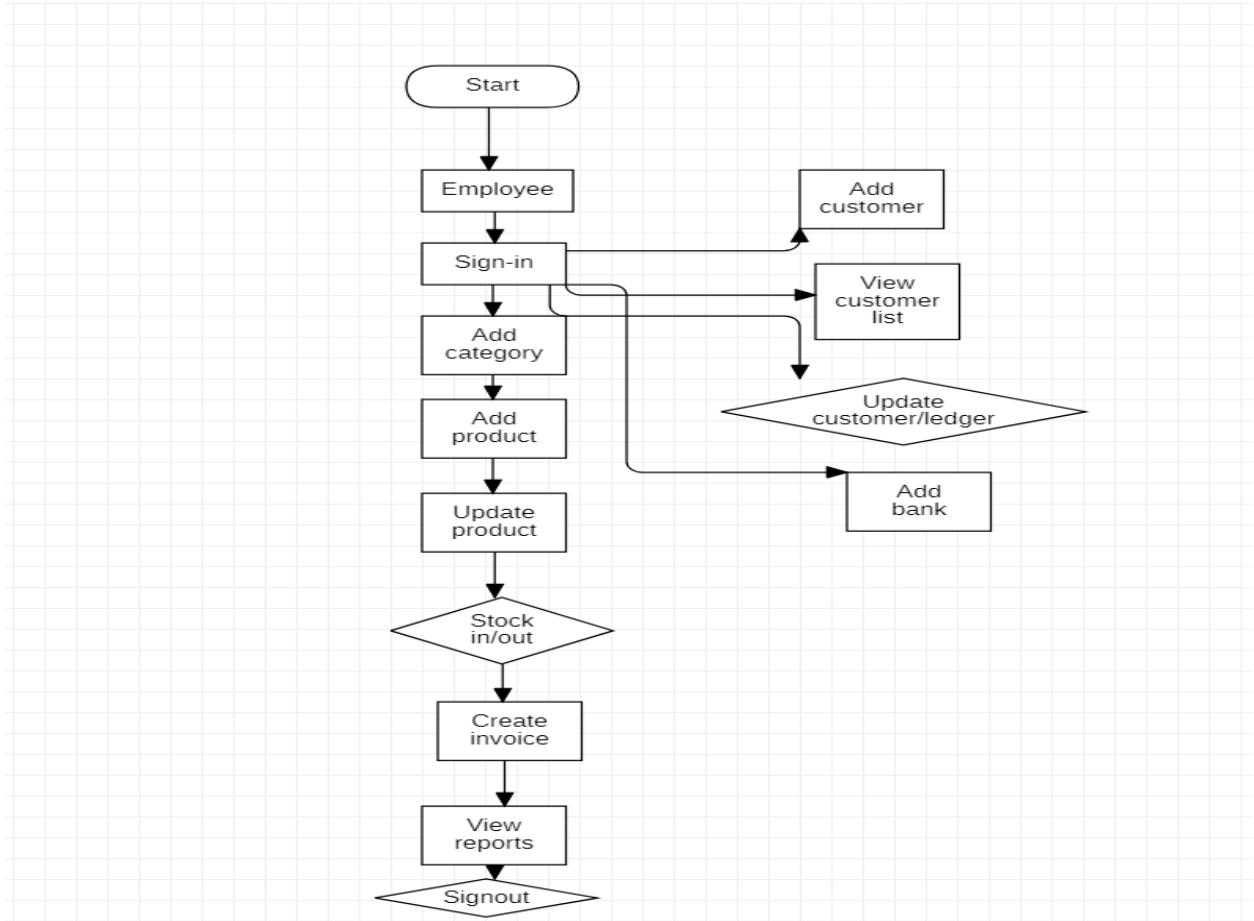

Figure 22: Flowchart

The system flowchart gives an insight into the flow and process of the system. This flowchart primarily focuses on the functions of the employee. The process starts when the admin signs. They can add category, then add product and perform certain functions in the product page. Stock in and stock out the products create invoice and view reports and finally logout.

### 4.2.3 Sequence diagram

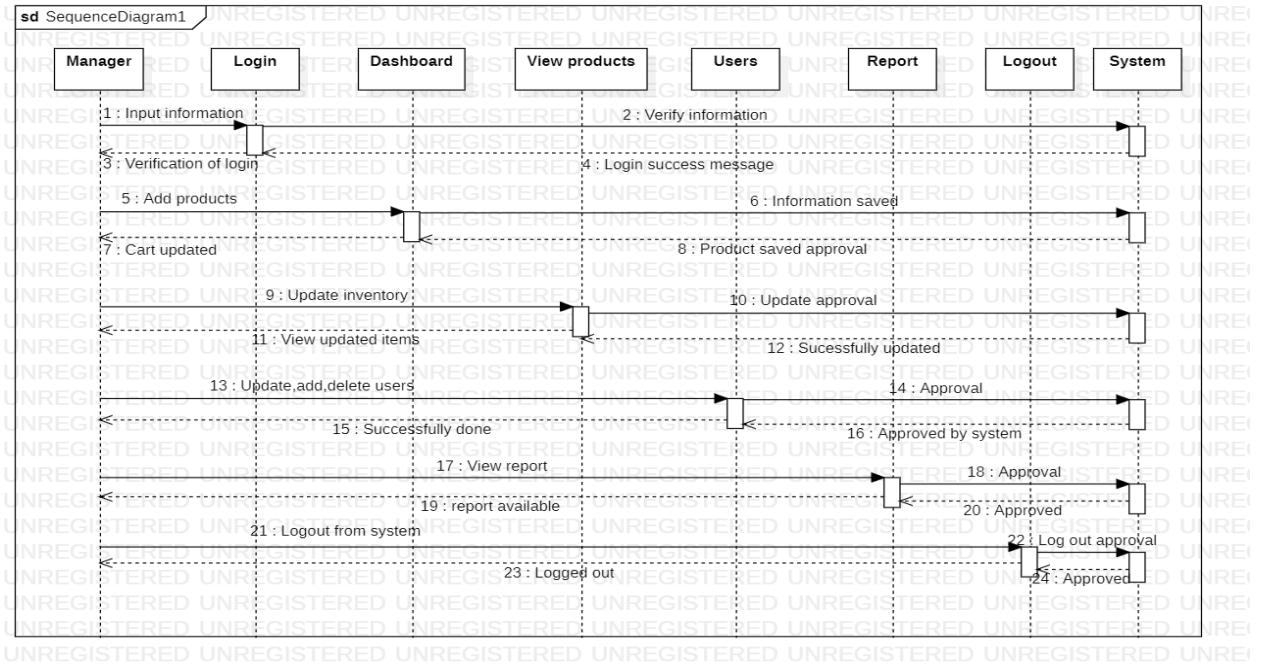

Figure 23: Sequence diagram

The above sequence diagram explains in the details about the actions that are carried out by a particular use-case. The use case in this instance is the admin/manager usecase.

### 4.2.4 Use case specification

#### Use case specification 1: Login

**Name:** Registration

**Description:** This use case is for the customer to login into the system to access various functions. The process ends when the customer successfully logged out.

**Author(s):** Immanuel

**Actor(s):** Customer

**Location(s):** Muscat

**Status:** Pathway defined

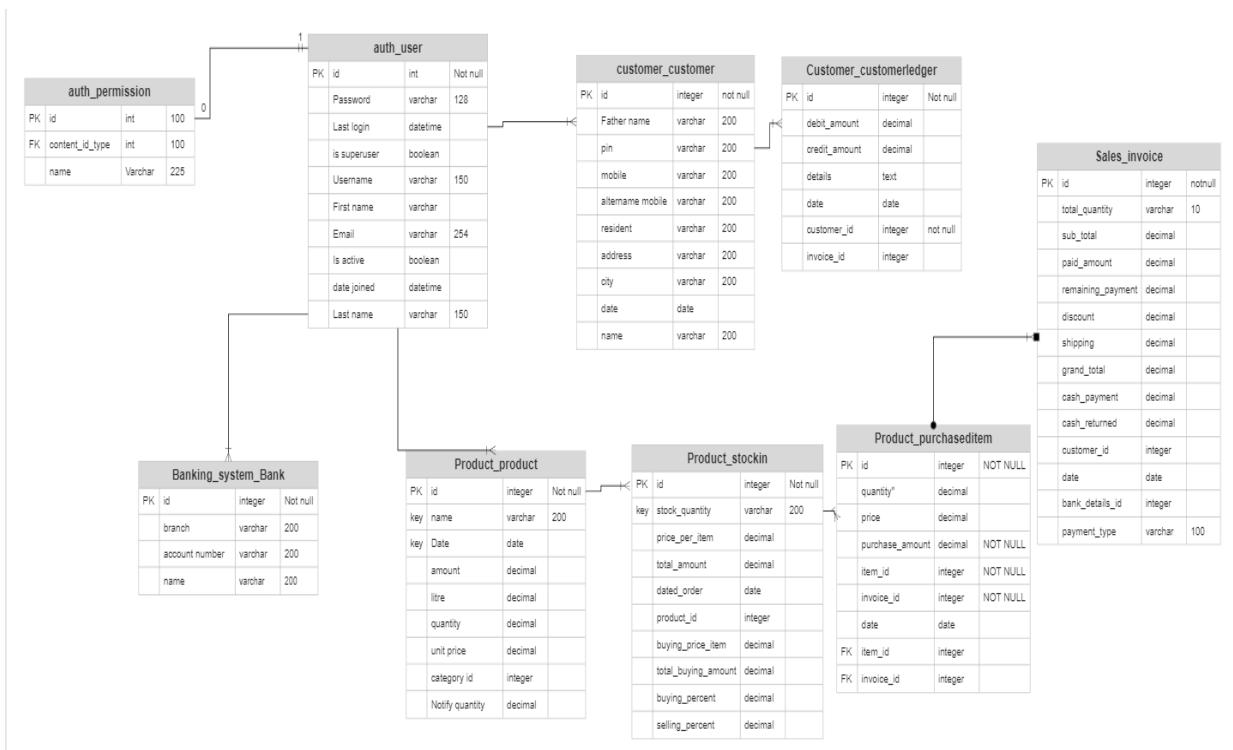

**Priority:** 1

**Assumption:** Employees need to login in order to access the system. If they don't, they won't be able to access the system. This is only possible if the customer has registered.

**Precondition(s):** The admin should input the employees to the system

**Postcondition(s):** The employee will be able to access the system

#### 4.2.5 ER Diagram

The ER diagram shows the relationship between the different entities that are present in the data base of the system. The most important entities were selected from the database and their relationships have been mapped. The auth\_permission entity gives permission to the user and the user can interact with the customer table and have access to the ledgers, bank functions. Product function, stock-in and stock-out and get the invoice based on the purchases.

## 4.3 Data dictionary

### 1. Author permissions table (auth\_permissions)

cid	name	type	notnull	dflt_value	pk
0	id	integer	1	Null	1
1	content_type_id	integer	1	Null	0
2	codename	varchar (100)	1	Null	0
3	name	varchar (255)	1	Null	0

Table 16: *author\_permissions*

The above table structure is for the permissions that the author can give to the users

### 2. User information table

cid	name	type	notnull	dflt_value	pk
0	id	integer	1	null	1
1	password	varchar (128)	1	null	0
2	last_login	datetime	0	null	0
3	is_superuser	bool	1	null	0
4	username	varchar (150)	1	null	0
5	first_name	varchar (30)	1	null	0
6	email	varchar (254)	1	null	0
7	is_staff	bool	1	null	0
8	is_active	bool	1	null	0
9	date_joined	datetime	1	null	0
10	last_name	varchar (150)	1	null	0

Table 17: *user\_permissions*

The above structure is of the information of the users that can be saved in backend of the system (Django)

### **3. Adding bank table (banking\_system\_bank)**

<b>cid</b>	<b>name</b>	<b>type</b>	<b>notnull</b>	<b>dflt_value</b>	<b>pk</b>
0	id	integer	1	null	1
1	branch	varchar (200)	0	null	0
2	account_number	varchar (200)	1	null	0
3	name	varchar (200)	1	Null	0

Table 18: Add bank table

This table structure shows the information that is stored while creating a new bank to save details.

### **4. Bank details (banking\_system\_bankdetails)**

<b>cid</b>	<b>name</b>	<b>type</b>	<b>notnull</b>	<b>dflt_value</b>	<b>pk</b>
0	id	integer	1	Null	1
1	description	text	0	Null	0
2	date	date	0	Null	0
3	credit	decimal	0	Null	0
4	debit	decimal	0	Null	0
5	bank_id	integer	0	Null	0
6	invoice_id	integer	0	Null	0

Table 19: Add bank details table

The above table structure shows the information that is stored while creating new details for the bank after creating a new bank.

## 5. Customer information (Customer\_customer)

<b>cid</b>	<b>name</b>	<b>type</b>	<b>notnull</b>	<b>dflt_value</b>	<b>pk</b>
0	id	integer	1	Null	1
1	father_name	varchar (200)	0	Null	0
2	Pin	varchar (200)	1	Null	0
3	mobile	varchar (200)	0	Null	0
4	alternate_mobile	varchar (200)	0	Null	0
5	resident	varchar (200)	0	Null	0
6	address	varchar (200)	0	Null	0
7	city	varchar (200)	0	Null	0
8	date	date	0	Null	0
9	name	varchar (200)	1	Null	0

Table 20: Customer information

The above structure shows the information that will be saved when creating a new customer

## 6. Customer ledger table (Customer\_customerledger)

<b>cid</b>	<b>name</b>	<b>type</b>	<b>notnull</b>	<b>dflt_value</b>	<b>pk</b>
0	id	integer	1	Null	1
1	debit_amount	decimal	0	Null	0
2	credit_amount	decimal	0	Null	0
3	details	text	0	Null	0
4	date	date	0	Null	0
5	customer_id	integer	1	Null	0
6	invoice_id	integer	0	Null	0

Table 21: Customer ledger information

This structure shows the information in the page to add customer ledger

## 7. Admin log (Django\_admin\_log)

cid	name	type	notnull	dflt_value	pk
0	id	integer	1	Null	1
1	action_time	datetime	1	Null	0
2	object_id	text	0	Null	0
3	object_repr	varchar (200)	1	Null	0
4	change_message	text	1	Null	0
5	content_type_id	integer	0	Null	0
6	user_id	integer	1	Null	0
7	action_flag	smallint unsigned	1	Null	0

Table 22: Admin Log

The above table shows the structure of the admin logs. The table shows the details of the action the admin has performed with the time stamps

## 8. Expense table (expense\_expense)

cid	name	type	notnull	dflt_value	pk
0	id	integer	1	Null	1
1	amount	decimal	0	Null	0
2	description	text	0	Null	0
3	date	date	0	Null	0

Table 23: expense table

The above table illustrates the structure of the table expenses which is used to store the expenses of the company

## 9. Product table (product\_product)

cid	name	type	notnull	dflt_value	pk
0	id	integer	1	Null	1
1	name	varchar (200)	0	Null	0
2	date	date	0	Null	0
3	amount	decimal	0	Null	0
4	litre	decimal	0	Null	0
5	quantity	decimal	0	Null	0
6	unit_price	decimal	0	Null	0
7	category_id	integer	0	Null	0
8	notify_qty	decimal	0	Null	0

Table 24: Product table

The above table shows the list of the structure of the table in which products can be added.

## 10. Product category table (product\_productcategory)

cid	name	type	notnull	dflt_value	pk
0	id	integer	1	Null	1
1	category	varchar (200)	0	Null	0
2	date	date	0	Null	0

Table 25: product category

This table shows the characteristics of the table in which the products are organized in the web application

## 11. Purchased items (product\_purchaseditems)

cid	name	type	notnull	dflt_value	pk
0	id	integer	1	Null	1
1	quantity	decimal	0	Null	0
2	price	decimal	0	Null	0
3	purchase_amount	decimal	0	Null	0
4	item_id	integer	1	Null	0
5	invoice_id	integer	1	Null	0
6	date	date	0	Null	0

Table 26: purchased items

The above table shows the data dictionary of the products that are purchased in the web application. These values get saved after the item is purchased.

## 12. Product stock-in (product\_stockin)

cid	name	type	notnull	dflt_value	pk
0	id	integer	1	Null	1
1	stock_quantity	varchar (200)	0	Null	0
2	price_per_item	decimal	0	Null	0
3	total_amount	decimal	0	Null	0
4	dated_order	date	0	Null	0
5	product_id	integer	0	Null	0
6	buying_price_item	decimal	0	Null	0
7	totalBuying_amount	decimal	0	Null	0
8	buying_percent	decimal	0	Null	0
9	selling_percent	decimal	0	Null	0

Table 27: stock in

The above table shows the data dictionary of the stock in table which is used to add the stocks of a product after adding the product

## 13. Product stock-out (product\_stockout)

<b>cid</b>	<b>name</b>	<b>type</b>	<b>notnull</b>	<b>dflt_value</b>	<b>pk</b>
0	id	integer	1	Null	1
1	stock_out_quantity	decimal	0	Null	0
2	date	date	0	Null	0
3	product_id	integer	0	Null	0
4	Buying_price	decimal	0	Null	0
5	Selling_price	decimal	0	Null	0
6	invoice_id	integer	0	Null	0

Table 28: stock out

The above table shows the structure of the stock out table which shows the list of stock that has left the company

#### 14. Sales invoice (sales\_invoice)

<b>cid</b>	<b>name</b>	<b>type</b>	<b>notnull</b>	<b>dflt_value</b>	<b>pk</b>
0	id	integer	1	Null	1
1	total_quantity	varchar (10)	0	Null	0
2	sub_total	decimal	0	Null	0
3	paid_amount	decimal	0	Null	0
4	remaining_payment	decimal	0	Null	0
5	discount	decimal	0	Null	0
6	shipping	decimal	0	Null	0
7	grand_total	decimal	0	Null	0
8	cash_payment	decimal	0	Null	0
9	cash_returned	decimal	0	Null	0
10	customer_id	integer	0	Null	0

11	date	date	0	Null	0
12	bank_details_id	integer	0	Null	0
13	payment_type	varchar (100)	1	Null	0

Table 29: sales invoice

The above table illustrates the information of the datatypes of the sales invoice which is stored in the database.

### 15. Installment invoice (sales\_invoiceinstallment)

cid	name	type	notnull	dflt_value	pk
0	id	integer	1	Null	1
1	paid_amount	decimal	0	Null	0
2	description	text	0	Null	0
3	date	date	0	Null	0
4	invoice_id	integer	1	Null	0

Table 30: installment invoice

The above data dictionary illustrated the types of data stored when the customers choose instalment as payment method.

## **4.4 Purpose of diagrams**

The purpose of various diagrams will be explained here

1. Use-Case diagram: Use-Case diagram is used for the modelling purpose of the behavior of the system. It only shows the actors and the outer activities of the system not internal.
2. Class diagram: Class diagram shows the classes, operation, and the attributes within each class of the system and shows their relationship.
3. Sequence diagram: Sequence diagram shows the interaction of the elements of the system and describe their actions.
4. Flowchart: it shows the sequence of the activities in the system
5. ER diagram: Explains how the entities of the system collaborate with each other

## **4.4 Database security**

Security risks and attacks are becoming more prevalent as applications become more complicated and reliant on third-party libraries, among other factors. According to a Forrester analysis published in 2020, the majority of external assaults are carried out by exploiting a software vulnerability or a web application.

The database used by this web application is sqlite3. The auditing of the database will be done using SQL server. SQL provides so many features for database. Microsoft assists in keeping the database management systems secure by releasing constant updates.

Django backend is also very protected against threats. Django has built in SQL injection protection which prevents from outside attacks. Django also has XSS protection which prevents attacks that come from the client side.

From the library point of view, only trusted libraries were imported.

## 4.5 Screenshots of each page

### 4.5.1 Login page

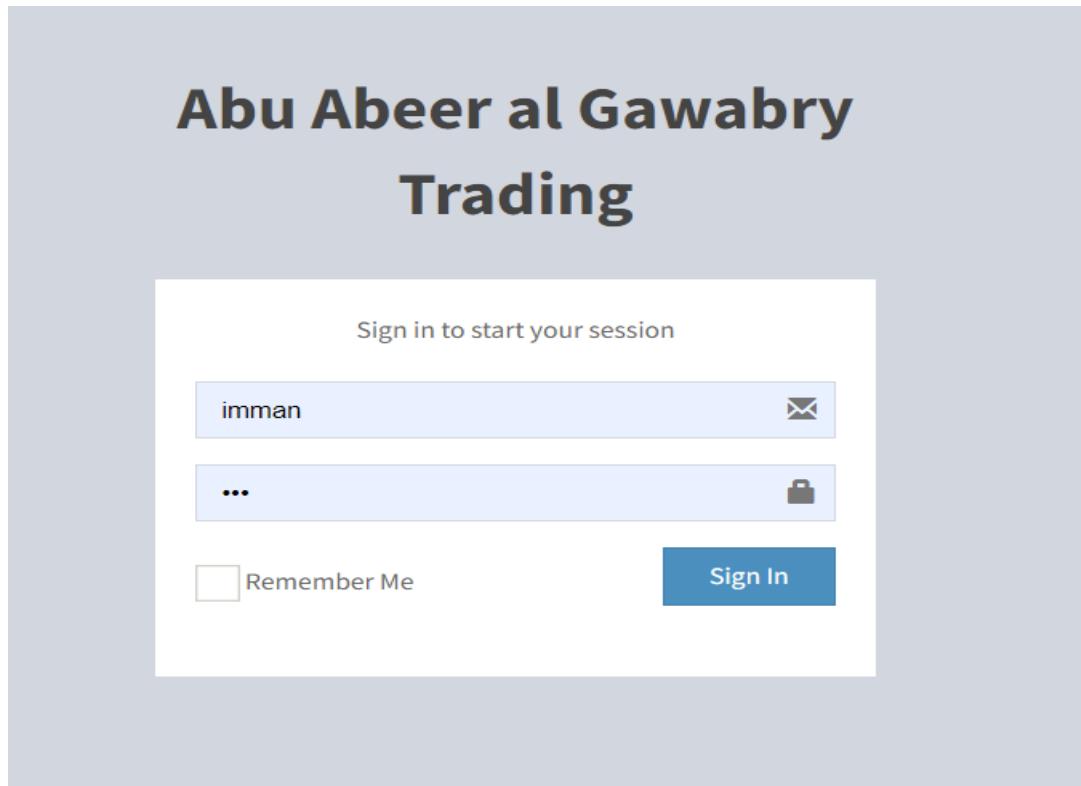

Figure 24: Login page

## 4.5.2 Add category page

The screenshot shows the 'Add Category' page of the AAAG Trading application. The left sidebar has a dark background with white text and icons. It includes sections for Main Navigation (Product, Add Category, Add Product, List Products), Customers, Banking System, Sales & Expenses, Expense System, Sales, Logs & Reports, Stock Logs, Reports, Admin, AdminPanel, User, and Logout. The 'Product' section is currently selected, indicated by a blue border around its icon. The main content area has a light blue header with the text 'Abu Abeer al Gawabry Trading'. Below the header is a breadcrumb navigation: 'Home > Add Category'. The central part of the page is titled 'Add Category' and contains a single input field labeled 'Category \*' with the placeholder 'Add Category'. At the bottom right of this input field is a blue 'Save' button.

Figure 25: Add category page

## 4.5.3 Add product page

The screenshot shows the 'Add Product' page of the AAAG Trading application. The left sidebar is identical to Figure 25, showing the 'Product' section as active. The main content area has a light blue header with the text 'Abu Abeer al Gawabry Trading'. Below the header is a breadcrumb navigation: 'Home > Product Category > Add Product'. The central part of the page is titled 'Add Product' and contains four input fields: 'Name \*' (placeholder 'Name'), 'Category \*' (dropdown menu showing 'Paint'), 'Notify Quantity \*' (placeholder 'Notify Quantity'), and 'Date \*' (date input field with placeholder 'mm/dd/yyyy'). At the bottom right of this form is a blue 'Save' button.

Figure 26: Add product page

#### 4.5.4 List product page

The screenshot shows the 'Product List' page. The left sidebar has a 'Main Navigation' section with 'Product' selected, showing 'Add Category', 'Add Product', and 'List Products'. Other sections include 'Customers', 'Banking System', 'Expense System', 'Sales', 'Logs & Reports', 'Stock Logs', 'Reports', 'Admin', 'AdminPanel', 'User', and 'Logout'. The top right shows 'Notifications' with a red badge. The main area is titled 'Product List' with search fields for 'Search by Name ...' and 'Search by Category ...'. A 'Search' button is at the bottom right. The table lists products:

Name	Category	Notify Quantity	Total Quantity	Available Item	Date	Action
Red	Table	11	10	7	June 2, 2022	<button>Update</button> <button>Stock In</button> <button>Stock Out</button>
Glass Door	Door	10	9	9	June 2, 2022	<button>Update</button> <button>Stock In</button> <button>Stock Out</button>
Plywood	Paint	50	49	49	May 11, 2022	<button>Update</button> <button>Stock In</button> <button>Stock Out</button>
Marble Tiles	Tiles	10	8	7	May 31, 2022	<button>Update</button> <button>Stock In</button> <button>Stock Out</button>
Asian Paints	Paint	10	180	179	March 2, 2022	<button>Update</button> <button>Stock In</button> <button>Stock Out</button>
Berger Paints	Paint	10	1600	1065	March 8, 2022	<button>Update</button> <button>Stock In</button> <button>Stock Out</button>

Figure 27: List product page

#### 4.5.5 update product

The screenshot shows the 'Product Update' page. The left sidebar is identical to Figure 27. The top right shows 'Notifications' with a red badge. The main area is titled 'Product Update' with a form containing:

- Name \***: Red
- Category \***: Table
- Notify Quantity \***: 11
- Date \***: 06/02/2022

A 'Save' button is at the bottom right.

Figure 28: update product page

## 4.5.6 Stock in product

The screenshot shows the AAAG Trading application interface. On the left is a dark sidebar with a white header 'AAAG Trading' and a 'Main Navigation' section. The 'Product' section is expanded, showing 'Add Category', 'Add Product', and 'List Products'. Other sections include 'Customers', 'Banking System', 'Sales & Expenses', 'Expense System', 'Sales', 'Logs & Reports', 'Stock Logs', 'Reports', 'Admin', 'AdminPanel', 'User', and 'Logout'. The main content area has a blue header 'Abu Abeer al Gawabry Trading' and a sub-header 'Add Stock In'. It displays a table titled 'Red | Table Stock In' with one row of data:

Product	Stock Quantity	Price Per Item	Selling %	Total Amount	Buying Price Item	Buying %	Total Buying Amount	Order Dated
Red	10	26	0	260	25	2.50	250	June 2, 2022

Figure 29: Product stock in page

## 4.5.7 Stock out product

The screenshot shows the AAAG Trading application interface, similar to Figure 29 but for 'Stock Out'. The sidebar and main header are identical. The sub-header is 'Stock Out'. It displays a table titled 'Red | Table Stock Out' with two rows of data:

Product	Stock Out Quantity	Dated
Red	1	June 3, 2022
Red	2	June 14, 2022

Figure 30: Product stock out page

## 4.5.8 Add customer

The screenshot shows the 'Add Customer' form within the AAAG Trading application. The left sidebar contains a navigation menu with items like Main Navigation, Product, Customers, Add Customer, Customer List, Banking System, Sales & Expenses, Expense System, Sales, Stock Logs, Reports, Admin, AdminPanel, User, and Logout. The main content area has a header 'Abu Abeer al Gawabry Trading'. Below it, the title 'Add Customer' is displayed. The form includes fields for Name\*, Father Name\*, Pin\*, City\*, Mobile\*, Alternate Mobile\*, Resident\*, and Complete Address\*. A 'Save' button is located at the bottom left of the form.

Figure 31: Add customer page

## 4.5.9 List customer

The screenshot shows the 'Customer List' page within the AAAG Trading application. The left sidebar is identical to Figure 31. The main content area has a header 'Abu Abeer al Gawabry Trading'. Below it, the title 'Customers List' is displayed. The page features search bars for 'Search by Name ...' and 'Search by Pin ...', and a 'Search' button. A table lists customer information: Name, Pin, Mobile, and Unpaid Amount. Each row includes 'Update' and 'Ledger' buttons. The table data is as follows:

Name	Pin	Mobile	Unpaid Amount	Action
New	12312312	12312131	500	<button>Update</button> <button>Ledger</button>
Wahid	69420	23213123	5000	<button>Update</button> <button>Ledger</button>
New	17283	828231	0	<button>Update</button> <button>Ledger</button>
Customer1	123513	78550898	0	<button>Update</button> <button>Ledger</button>
Test	64534	78550898	0	<button>Update</button> <button>Ledger</button>
Test	1234	78550898	2400	<button>Update</button> <button>Ledger</button>
Immanuel	1234567	78550898	9000	<button>Update</button> <button>Ledger</button>

Figure 32: Customer list page

## 4.5.10 Customer ledger

The screenshot shows the 'Customer ledger' page of the AAAG Trading application. The left sidebar contains a navigation menu with sections like Main Navigation, Product, Customers, Banking System, Sales & Expenses, Expense System, Admin, and User. The main content area is titled 'New | Ledger Statement'. It features a date input field ('mm/dd/yyyy') and a search button. Below these are four columns: Date, Detail, Debit/Ledger Amount, and Credit/Payment Amount. A single row is displayed: May 5, 2022, New amount, 500, and 0.

Figure 33: Customer ledger page

## 4.5.11 Add ledger

The screenshot shows the 'Add ledger' page of the AAAG Trading application. The left sidebar is identical to Figure 33. The main content area is titled 'New | Debit Amount'. It includes fields for Debit Amount (with a placeholder 'Debit Amount'), Date (with a placeholder 'mm/dd/yyyy'), and Details (with a placeholder 'Details'). A 'Save' button is located at the bottom right of the form.

Figure 34: Add ledger page

## 4.5.12 Pay ledger

The screenshot shows the AAAG Trading application's main navigation bar on the left and a specific 'Pay ledger' form on the right. The navigation bar includes links for Product, Customers, Banking System, Sales & Expenses, Expense System, Sales, Stock Logs, Reports, Admin, AdminPanel, User, and Logout. The right-hand form is titled 'Wahid | Credit Amount' and contains fields for 'Credit Amount' (with a placeholder 'Credit Amount'), 'Date' (with a placeholder 'mm/dd/yyyy'), and 'Details' (with a placeholder 'Details'). A blue 'Save' button is at the bottom right.

Figure 35: Pay ledger

## 4.5.13 Add bank

The screenshot shows the AAAG Trading application's main navigation bar on the left and a specific 'Add bank' form on the right. The navigation bar includes links for Product, Customers, Banking System, Sales & Expenses, Expense System, Sales, Stock Logs, Reports, Admin, AdminPanel, User, and Logout. The right-hand form is titled 'Add Bank' and contains fields for 'Bank Name' (with a placeholder 'Bank Name'), 'Bank Branch' (with a placeholder 'Bank Branch'), and 'Account Number' (with a placeholder 'Account Number'). A blue 'Save' button is at the bottom right.

Figure 36: add bank

## 4.5.14 List bank

The screenshot shows the AAAG Trading application interface. The left sidebar contains a main navigation menu with categories like Main Navigation, Product, Customers, Banking System (selected), Add Bank, Bank List, Sales & Expenses, Expense System, Sales, Stock Logs, Reports, Admin, AdminPanel, User, and Logout. The URL in the address bar is 127.0.0.1:8000/bank\_detail/list/#.

The right panel title is "Bank List". It features two search input fields: "Search by Bank Name ..." and "Search by Account No ...". A "Search" button is located to the right of the search fields. Below the search area is a table titled "Bank List" with columns: Bank Name, Bank Branch, Account number, Balance, and Action. Two rows of data are listed:

Bank Name	Bank Branch	Account number	Balance	Action
Bank Muscat	Qurum	123456778	-148679	<a href="#">Update</a> <a href="#">Details</a>
Nbo	Azaiba	0010025465220	2750	<a href="#">Update</a> <a href="#">Details</a>

Figure 37: list bank

## 4.5.15 Update bank

The screenshot shows the AAAG Trading application interface. The left sidebar contains a main navigation menu with categories like Main Navigation, Product, Customers, Banking System (selected), Add Bank, Bank List, Sales & Expenses, Expense System, Sales, Stock Logs, Reports, Admin, AdminPanel, User, and Logout. The URL in the address bar is 127.0.0.1:8000/bank\_detail/update/1.

The right panel title is "Update Bank". It contains three input fields: "Bank Name \*", "Bank Branch \*", and "Account Number \*". The "Bank Name" field has "Bank Muscat" entered. The "Bank Branch" field has "Qurum" entered. The "Account Number" field has "123456778" entered. A "Save" button is located at the bottom right of the form.

Figure 38: Update bank

#### 4.5.16 Add debit

The screenshot shows the AAAG Trading application interface. The left sidebar contains a 'Main Navigation' menu with various options like Product, Customers, Banking System, Sales & Expenses, Expense System, Sales, Logs & Reports, Stock Logs, Reports, Admin, AdminPanel, User, and Logout. The 'Banking System' option is currently selected. The main content area has a blue header bar with the text 'Abu Abeer al Gawabry Trading'. Below the header, the URL 'Home > Bank Detail > Add Debit' is visible. The central part of the screen displays a modal window titled 'Bank Muscat | Add Debit Amount'. The modal contains three fields: 'Debit Amount \*' with an input field, 'Date \*' with a date picker, and 'Details \*' with a text area. A 'Save' button is located at the bottom right of the modal.

Figure 39: Add debit

#### 4.5.17 Add credit

The screenshot shows the AAAG Trading application interface, identical to Figure 39 but for adding credit. The left sidebar and header are the same. The main content area displays a modal window titled 'Bank Muscat | Add Credit Amount'. It contains three fields: 'Credit Amount \*' with an input field, 'Date \*' with a date picker, and 'Detail \*' with a text area. A 'Save' button is located at the bottom right of the modal.

Figure 40: Add credit

#### 4.5.18 Add expense

The screenshot shows the AAAG Trading application interface. On the left is a dark sidebar with a white header 'AAAG Trading'. The sidebar contains a 'Main Navigation' section with links: Product, Customers, Banking System, Sales & Expenses (with 'Expense System' expanded), Sales, Logs & Reports, Stock Logs, Reports, Admin (with 'AdminPanel' expanded), User, and Logout. Above the sidebar, the page title is 'Abu Abeer al Gawabry Trading'. In the top right corner, there is a 'Notifications' icon with a red notification count of 1. Below the title, the breadcrumb navigation shows 'Home > Add Expense'. The main content area is titled 'Add Expense' and contains three input fields: 'Amount \*' (with a placeholder 'Amount'), 'Date \*' (with a placeholder 'mm/dd/yyyy'), and 'Description \*' (with a placeholder 'Description'). A blue 'Save' button is located at the bottom right of the form.

Figure 41: Add expense

#### 4.5.19 Expense list

The screenshot shows the AAAG Trading application interface. The sidebar and title are identical to Figure 41. The main content area is titled 'Expense List' and features a search bar with a placeholder 'mm/dd/yyyy' and a blue 'Search' button. Below the search bar is a table with four columns: 'Amount', 'Description', 'Date', and 'Action'. There is one row of data in the table:

Amount	Description	Date	Action
16,212	For Supplies	May 16, 2022	<button>Update</button> <button>Delete</button>

Figure 42: Expense list

## 4.5.20 Update expense

The screenshot shows the 'Update Expense' form within the AAAG Trading application. The left sidebar contains a navigation menu with sections like Main Navigation, Sales & Expenses, and Admin. Under Sales & Expenses, 'Expense System' is expanded, showing 'Add Expense' and 'Expense List'. The main content area has a title 'Update Expense' and three input fields: 'Amount' (16212), 'Date' (mm/dd/yyyy), and 'Description' (For supplies). A 'Save' button is at the bottom right.

Figure 43: Update expense

## 4.5.21 Invoice Page

The screenshot shows the 'Create Invoice' page. The left sidebar includes 'Expense System' (selected), 'Sales' (selected), 'Create Invoice' (highlighted), and 'Invoices List'. The main area features a table with columns Item, Stock, Price, Quantity, and Total. To the right, there's a section for 'Billed To' (set to '17-06-22') and a dropdown for payment method ('Cash'). Below this is a 'Customer' field and a 'New Customer' link. At the bottom of the table is an 'Add Item' button. To the right of the table is a 'Customer Ledger' section with 'Received Amount' (0) and 'Remaining Amount' (0). Further down is a 'Cash Calculator' section with 'Cash Payment' (0) and 'Returned Cash' (0). A large blue 'Create Invoice' button is at the bottom right. The footer includes copyright information and a version number (Version 1.1.0).

Figure 44: Invoice page

## 4.5.22 Invoice list

The screenshot shows the 'Invoice List' page. On the left is a dark sidebar with navigation links for Product, Customers, Banking System, Sales & Expenses, Expense System, Sales (with Create Invoice and Invoices List), Logs & Reports, Stock Logs, Reports, Admin, AdminPanel, User, and Logout. The main area has a header with 'Home > Invoice List'. Below the header is a search bar with fields for 'Search by Name ...', 'Search by Invoice No ...', 'mm/dd/yyyy', and a date picker, followed by a 'Search' button. The main content is a table titled 'Invoice List' with the following columns: Date, Invoice, Customer, Payment, Installment, Quantity, Sub Total, Grand Total, and Action. The table contains 10 rows of invoice data. At the bottom of the page, there is a copyright notice 'Copyright © 2022 Abu Abeer al Gawabry Trading. All rights reserved.' and a version number 'Version 1.1.0'.

Date	Invoice	Customer	Payment	Installment	Quantity	Sub Total	Grand Total	Action
June 14, 2022	0000014	Wahid	Cash	-	2	0	52	<button>View</button> Not Available
June 14, 2022	0000013	Wahid	Installment	✓	20	0	340	<button>View</button> <button>Installments</button>

Figure 45: Invoice list

## 4.5.23 view invoice

The screenshot shows the 'View invoice' page. The sidebar is identical to Figure 45. The main area has a header with 'Create Invoice' and 'Print Invoice' buttons, and a breadcrumb 'Home > Invoice List > Invoice View'. The title 'Abu Abeer al Gawabry Trading' is at the top. Below it is a section titled 'Invoice' with fields for Customer Name (Wahid), Mobile No (23213123), Customer Pin (69420), Billed Date (14-06-22), Payment Type (Cash), and Receipt No (0000014). The main content is a table with columns 'Item', 'Quantity', and 'Total'. It lists a 'Red Table' with a quantity of 2 and a total of 52. Below the table are summary rows: 'Total Quantity: 2' (Grand Total 52), 'Cash Payment' (52), 'Returned Cash' (0), 'Received Amount' (52), and 'Remaining Payment' (0). At the bottom, there is a 'Thank You' message from Abu Abeer al Gawabry Trading.

Item	Quantity	Total
Red Table	2	52

**Customer Name:** Wahid  
**Mobile No:** 23213123  
**Customer Pin:** 69420

**Billed Date:** 14-06-22  
**Payment Type:** Cash  
**Receipt No:** 0000014

Total Quantity: 2	Grand Total
	52
	Cash Payment
	Returned Cash
	Received Amount
	Remaining Payment

Thank You  
 Abu Abeer al Gawabry Trading

Figure 46: View invoice

## 4.5.24 Print voice

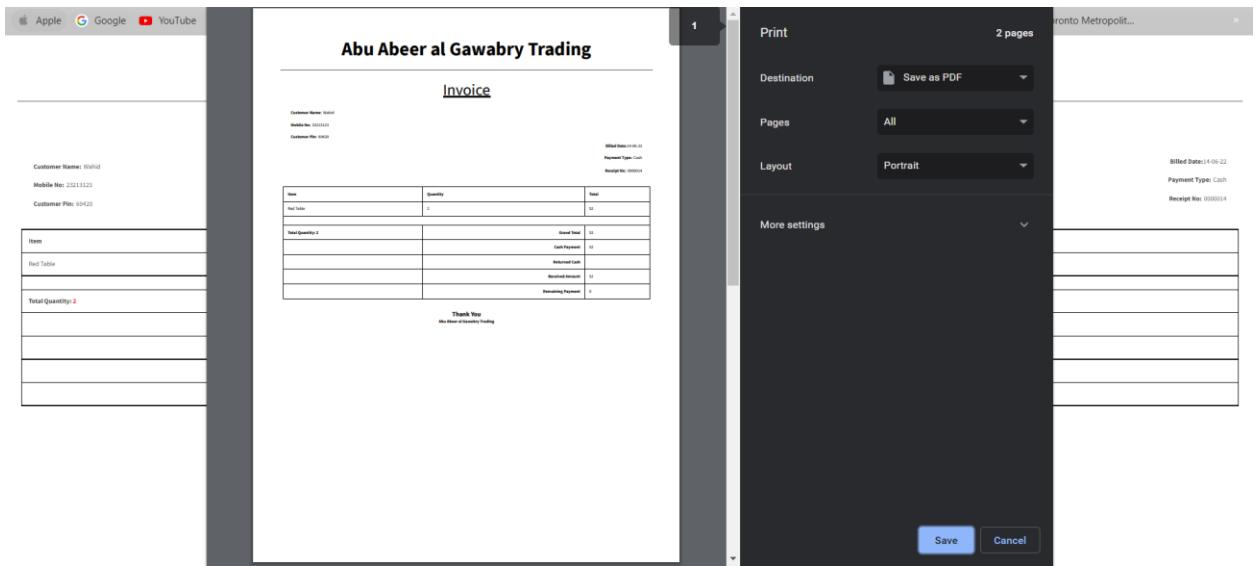

Figure 47: Print invoice

## 4.5.25 View installment

The screenshot shows the 'AAAG Trading' application interface. The left sidebar includes 'Main Navigation', 'Product', 'Customers', 'Banking System', 'Expense System', 'Sales', 'Create Invoice', 'Invoices List', 'Stock Logs', 'Reports', 'AdminPanel', 'User', and 'Logout'. The main content area is titled 'Abu Abeer al Gawabry Trading' and shows the following 'Installments' table:

**Installments**

Date	Invoice	Customer	Paid Amount	Description	Action
June 14, 2022	0000013	Wahid	250	Advance Payment	<button>Delete</button>
June 2, 2022	0000013	Wahid	100	Added installment	<button>Delete</button>

Total Installment Paid: 350  
Remaining Installments: -10

Figure 48: view installment

#### 4.5.26 Add installment

The screenshot shows the AAAG Trading software interface. The left sidebar contains a 'Main Navigation' menu with options like Product, Customers, Banking System, Sales & Expenses, Logs & Reports, Admin, and User. The 'Sales & Expenses' section is expanded, showing Expense System, Sales, Create Invoice, Invoices List, Stock Logs, and Reports. The 'Sales' option under 'Sales & Expenses' is selected. The top navigation bar shows 'Abu Abeer al Gawabry Trading'. The right side of the screen displays a modal window titled 'Add Installment'. Inside the modal, the customer name 'Wahid' and item 'Berger Paints' are pre-filled. There are three input fields: 'Amount\*' (with placeholder 'Amount'), 'Date\*' (with placeholder 'mm/dd/yyyy'), and 'Description\*' (with placeholder 'Description'). A blue 'Save' button is at the bottom right of the modal.

Figure 49: Add installment

#### 4.5.27 Daily logs

The screenshot shows the AAAG Trading software interface. The left sidebar contains a 'Main Navigation' menu with options like Product, Customers, Banking System, Sales & Expenses, Logs & Reports, Admin, and User. The 'Logs & Reports' section is expanded, showing Stock Logs, Daily Logs, and Monthly Logs. The 'Stock Logs' option under 'Logs & Reports' is selected. The top navigation bar shows 'Abu Abeer al Gawabry Trading'. The right side of the screen displays a table titled 'Daily Stock Logs'. The table has columns for 'Item Name', 'No. of Invoices', and 'Stock Out'. At the top of the table, there are search and filter fields: 'Search...' and 'Filter By Date' (set to 06/17/2022). Below the table, a message says 'No Logs Found'. The bottom right corner of the table area shows the text 'Logs Date: 2022-06-17 | Total Price: OMR. 0'.

Figure 50: Daily logs

## 4.5.28 Monthly stocks

The screenshot shows the AAAG Trading application interface. The left sidebar contains a navigation menu with items like Main Navigation, Product, Customers, Banking System, Sales & Expenses, Expense System, Sales, Stock Logs (which is currently selected), Daily Logs, Monthly Logs, Reports, Admin, AdminPanel, User, and Logout. The main content area is titled "Monthly Stock Logs | June 2022". It features a search bar and a filter dropdown set to "June". A message at the top right says "Logs Date: June 2022 | Total Price: OMR. 25583". Below this is a table with columns: Item Name, No. of Invoices, and Stock Out. The data in the table is:

Item Name	No. of Invoices	Stock Out
Asian Paints	1	1
Berger Paints	6	535
Marble Tiles	1	1
Red	2	3

Figure 51: Monthly logs

## 4.5.29 Reports

The screenshot shows the AAAG Trading application interface. The left sidebar contains a navigation menu with items like Main Navigation, Product, Customers, Banking System, Sales & Expenses, Expense System, Sales, Stock Logs, Reports (which is currently selected), Monthly Reports, Admin, AdminPanel, User, and Logout. The main content area is titled "Monthly Sales Reports". It features a chart titled "Monthly Sales Reports" showing sales volume over time from July 2021 to June 2022. Below the chart is a table with columns: Date, Total Customer, Total Quantity, Grand Total, and Total Cash Payment. The data in the table is:

Date	Total Customer	Total Quantity	Grand Total	Total Cash Payment
Jun-22	7	526	25583	507

Figure 52: Month reports

## 4.5.30 Admin panel

The screenshot shows the Django administration interface. At the top, there's a header bar with "Django administration" on the left and "WELCOME, IMMAN VIEW SITE / CHANGE PASSWORD / LOG OUT" on the right. Below the header, the main area is titled "Site administration". It features a sidebar on the left with several categories: "AUTHENTICATION AND AUTHORIZATION" (Groups, Users), "BANKING\_SYSTEM" (Bank details, Banks), "COMMON" (User profiles), "CUSTOMER" (Customer ledgers, Customers), "EXPENSE" (Expenses), and "PRODUCT". Each category has "Add" and "Change" buttons. To the right of the sidebar, there are two panels: "Recent actions" and "My actions". The "Recent actions" panel lists recent operations: "Employee1 User" (Add), "tester User" (Change), "tester User" (Add), "0000001 Invoice" (Delete), "0000002 Invoice" (Delete), "0000003 Invoice" (Delete), "0000004 Invoice" (Delete), "0000005 Invoice" (Delete), "0000006 Invoice" (Delete), and "Invoice installment" (Delete). The "My actions" panel lists similar recent operations.

Figure 53: Admin panel

# **Chapter 5: Development and evaluation**

## **5.2 Outline of the chapter**

This chapter contains the explanation about each page of the system with some information regarding it. It will also contain screen shots along with the codes. The aspect of testing required for the system will be justified and the different test strategies will be explained.

Test cases will be attached in the form of tables to see the outcome of the tests performed and the desired output. Analysis of the test results will also be presented along with a critical evaluation of the system.

## **5.2 Description of the system**

This section will contain a brief description of the system along with its screenshots and explanation of the screenshots

### **5.2.1 Login page**

*Figure 54: Login*

The login page is one of the main pages of the system. The employee and admin/manager can login to the system through this page to access the main functionalities

## 5.2.2 Add category page

The screenshot shows the 'Add Category' page of the AAAG Trading application. The left sidebar contains a navigation menu with items like Main Navigation, Product (selected), Add Category, Add Product, List Products, Customers, Banking System, Sales & Expenses, Expense System, Sales, Logs & Reports, Stock Logs, Reports, Admin, AdminPanel, and User. The main content area has a blue header 'Abu Abeer al Gawabry Trading'. Below it, a sub-header 'Add Category' is displayed. The form itself has a title 'Add Category' and a single input field labeled 'Category \*' containing 'Add Category'. A blue 'Save' button is located at the bottom right of the form. The URL in the address bar is 'http://127.0.0.1:8000/product/add/category/'. The top right corner shows a 'Notifications' icon with a red notification count of 1.

Figure 55: add category

In this page, the user can add the category in which the product belongs to. This makes it easier to organize the products in the inventory.

## 5.2.3 Add product

The screenshot shows the 'Add Product' page of the AAAG Trading application. The left sidebar is identical to the previous screenshot, showing the 'Product' section is selected. The main content area has a blue header 'Abu Abeer al Gawabry Trading'. Below it, a sub-header 'Add Product' is displayed. The form has several fields: 'Name \*' with an input field for 'Name'; 'Category\*' with a dropdown menu currently showing 'Paint'; 'Notify Quantity \*' with an input field for 'Notify Quantity'; and 'Date \*' with a date input field set to 'mm/dd/yyyy'. A blue 'Save' button is located at the bottom right of the form. The URL in the address bar is 'http://127.0.0.1:8000/product/add/product/'. The top right corner shows a 'Notifications' icon with a red notification count of 1.

This is the page in which product is added. The product name, category, notification quantity and the date must be added to add a product.

## 5.2.4 List product

The screenshot shows a web application interface for managing products. On the left is a dark sidebar with a navigation menu. The main area has a blue header bar with the text 'Abu Abeer al Gawabry Trading'. Below the header is a search bar with two input fields: 'Search by Name ...' and 'Search by Category ...', followed by a 'Search' button. The main content area is titled 'Product List' and contains a table with the following data:

Name	Category	Notify Quantity	Total Quantity	Available Item	Date	Action
Red	Table	11	10	7	June 2, 2022	<button>Update</button> <button>Stock In</button> <button>Stock Out</button>
Glass Door	Door	10	9	9	June 2, 2022	<button>Update</button> <button>Stock In</button> <button>Stock Out</button>
Plywood	Paint	50	49	49	May 11, 2022	<button>Update</button> <button>Stock In</button> <button>Stock Out</button>
Marble Tiles	Tiles	10	8	7	May 31, 2022	<button>Update</button> <button>Stock In</button> <button>Stock Out</button>
Asian Paints	Paint	10	180	179	March 2, 2022	<button>Update</button> <button>Stock In</button> <button>Stock Out</button>
Berger Paints	Paint	10	1600	1065	March 8, 2022	<button>Update</button> <button>Stock In</button> <button>Stock Out</button>

Figure 56: list product

This page shows a list of all the products available including the name, category, notification quantity, total quantity, items available and the date it was added. It also has certain actions the users can take such as updating, stock-in and stock-out.

## 5.2.5 Update product

The screenshot shows a web application interface for updating a product. On the left is a dark sidebar with a navigation menu. The main area has a blue header bar with the text 'Abu Abeer al Gawabry Trading'. Below the header is a form titled 'Product Update' with the following fields:

- Name \***: Red
- Category \***: Table
- Notify Quantity \***: 11
- Date \***: 06/02/2022

At the bottom right of the form is a 'Save' button.

Figure 57: update

The employees can update the products on this page

## 5.2.6 Stock in

Product	Stock Quantity	Price Per Item	Selling %	Total Amount	Buying Price Item	Buying %	Total Buying Amount	Order Dated
Glass door	9	55	0	495	50	2.50	450	June 3, 2022

Figure 58: stock in

This page is used to add stock into the system

## 5.2.7 Stock out product

Product	Stock Out Quantity	Dated
Red	1	June 3, 2022
Red	2	June 14, 2022

Figure 59: Product stock out page

This page is used to manually remove the existing stock from the inventory

## 5.2.8 Add customer

The screenshot shows the 'Add Customer' form. On the left is a dark sidebar with navigation links: Main Navigation, Product, Customers (selected), Add Customer, Customer List, Banking System, Sales & Expenses, Expense System, Sales, Logs & Reports, Stock Logs, Reports, Admin, AdminPanel, User, and Logout. The main area has a blue header 'Abu Abeer al Gawabry Trading'. Below it is a sub-header 'Home > Add Customer'. The form title is 'Add Customer'. It contains fields for Name\*, Father Name\*, Pin\*, City\*, Mobile\*, Alternate Mobile\*, Resident\*, and Complete Address\*. There is a 'Save' button at the bottom.

Figure 60: Add customer page

In this page, the users can add customer information such as name, father name, Pin, city, Mobile, alternate mobile, resident and the complete address

## 5.2.9 List customer

The screenshot shows the 'Customer List' page. The left sidebar is identical to Figure 60. The main area has a blue header 'Abu Abeer al Gawabry Trading' and a sub-header 'Home > Customer List'. The title is 'Customers List'. It features search bars for 'Search by Name ...' and 'Search by Pin ...', and a 'Search' button. Below is a table with columns: Name, Pin, Mobile, Unpaid Amount, and Action. The table lists several customers with their details and 'Update' and 'Ledger' buttons in the Action column.

Name	Pin	Mobile	Unpaid Amount	Action
New	12312312	12312131	500	<button>Update</button> <button>Ledger</button>
Wahid	69420	23213123	5000	<button>Update</button> <button>Ledger</button>
New	17283	828231	0	<button>Update</button> <button>Ledger</button>
Customer1	123513	78550898	0	<button>Update</button> <button>Ledger</button>
Test	64534	78550898	0	<button>Update</button> <button>Ledger</button>
Test	1234	78550898	2400	<button>Update</button> <button>Ledger</button>
Immanuel	1234567	78550898	9000	<button>Update</button> <button>Ledger</button>

Figure 61: Customer list page

This page is used to show a list of customers that exist along with some actions

## 5.2.10 Customer ledger

The screenshot shows the 'Customer ledger' page for 'Abu Abeer al Gawabry Trading'. The left sidebar contains a navigation menu with sections like Main Navigation, Product, Customers, Banking System, Sales & Expenses, Expense System, Sales, Stock Logs, Reports, Admin, AdminPanel, User, and Logout. The main content area has a header 'New | Ledger Statement' with a date input field ('mm/dd/yyyy') and a 'Search' button. Below this is a table with columns: Date, Detail, Debit/Ledger Amount, and Credit/Payment Amount. One row is visible: May 5, 2022, New amount, 500, 0.

Figure 62: Customer ledger page

This page shows the customer ledger. The employees can add a new ledger or use it to pay ledgers

## 5.2.11 Add ledger

The screenshot shows the 'Add ledger' page for 'Abu Abeer al Gawabry Trading'. The left sidebar is identical to Figure 62. The main content area has a header 'New | Debit Amount' with three input fields: 'Debit Amount' (with placeholder 'Debit Amount'), 'Date' (with placeholder 'mm/dd/yyyy'), and 'Details' (with placeholder 'Details'). A 'Save' button is at the bottom right.

Figure 63: Add ledger page

In the add ledger page, the user can add the debit amount, date of the ledger as well as the details

## 5.2.12 Pay ledger

The screenshot shows the 'Pay ledger' interface. On the left is a dark sidebar menu with various trading-related options like Product, Customers, Banking System, Sales, and Admin. The main area has a blue header 'Abu Abeer al Gawabry Trading'. Below it is a white form titled 'Wahid | Credit Amount'. The form contains fields for 'Credit Amount' (with a placeholder 'Credit Amount'), 'Date' (with a placeholder 'mm/dd/yyyy'), and 'Details' (with a placeholder 'Details'). A blue 'Save' button is at the bottom right.

Figure 64: Pay ledger

In the pay ledger screen, the user can add the credit details of the customers.

## 5.2.13 Add bank

The screenshot shows the 'Add bank' interface. It has a similar dark sidebar menu as Figure 64. The main area has a blue header 'Abu Abeer al Gawabry Trading' and a sub-header 'Notifications' with a red notification badge. Below is a white form titled 'Add Bank'. It has three required fields: 'Bank Name' (placeholder 'Bank Name'), 'Bank Branch' (placeholder 'Bank Branch'), and 'Account Number' (placeholder 'Account Number'). A blue 'Save' button is at the bottom right. The URL in the browser bar is 'Home > Add Bank'.

Figure 65: add bank

In this page, the users can add bank information

## 5.2.14 List bank

The screenshot shows the AAAG Trading application interface. The left sidebar contains a navigation menu with sections like Main Navigation, Product, Customers, Banking System (which is expanded to show Add Bank and Bank List), Sales & Expenses, Expense System, Sales, Logs & Reports, Stock Logs, Reports, Admin, AdminPanel, User, and Logout. The URL in the address bar is 127.0.0.1:8000/bank\_detail/list/#.

The main content area is titled "Bank List". It features two search input fields: "Search by Bank Name ..." and "Search by Account No ...". A "Search" button is located to the right of the search fields. Below the search area is a table with the following columns: Bank Name, Bank Branch, Account number, Balance, and Action. Two rows of data are listed:

Bank Name	Bank Branch	Account number	Balance	Action
Bank Muscat	Qurum	123456778	-148679	<a href="#">Update</a> <a href="#">Details</a>
Nbo	Azaiba	0010025465220	2750	<a href="#">Update</a> <a href="#">Details</a>

Figure 66: list bank

List of the banks can be views on this page

## 5.2.15 Update bank

The screenshot shows the AAAG Trading application interface. The left sidebar contains a navigation menu with sections like Main Navigation, Product, Customers, Banking System (which is expanded to show Add Bank and Bank List), Sales & Expenses, Expense System, Sales, Logs & Reports, Stock Logs, Reports, Admin, AdminPanel, User, and Logout. The URL in the address bar is 127.0.0.1:8000/bank\_detail/update/2/#.

The main content area is titled "Update Bank". It contains three form fields with validation requirements indicated by red asterisks: "Bank Name \*", "Bank Branch \*", and "Account Number \*". The "Bank Name" field has "Bank Muscat" entered. The "Bank Branch" field has "Qurum" entered. The "Account Number" field has "123456778" entered. A "Save" button is located at the bottom right of the form.

Figure 67: Update bank

Bank details can be viewed on this page

## 5.2.16 Add debit

The screenshot shows the AAAG Trading application interface. On the left is a dark sidebar with a white header 'AAAG Trading' and a 'Main Navigation' section containing various menu items like Product, Customers, Banking System, Sales & Expenses, Expense System, Sales, Logs & Reports, Stock Logs, Reports, Admin, AdminPanel, User, and Logout. The 'Banking System' item is expanded, showing 'Add Bank' and 'Bank List'. The main content area has a blue header 'Abu Abeer al Gawabry Trading' and a sub-header 'Bank Muscat | Add Debit Amount'. Below this is a form with three fields: 'Debit Amount \*' (with a placeholder 'Debit Amount'), 'Date \*' (with a placeholder 'mm/dd/yyyy'), and 'Details \*' (with a placeholder 'Details'). At the bottom right of the form is a blue 'Save' button. In the top right corner of the main window, there is a 'Notifications' icon with a red notification dot.

Figure 68: Add debit

Employees and admin/manager can add debit amount in this page including date, and the details.

## 5.2.17 Add credit

The screenshot shows the AAAG Trading application interface, similar to Figure 68. The left sidebar and main header are identical. The main content area has a blue header 'Abu Abeer al Gawabry Trading' and a sub-header 'Bank Muscat | Add Credit Amount'. Below this is a form with three fields: 'Credit Amount \*' (with a placeholder 'Credit Amount'), 'Date \*' (with a placeholder 'mm/dd/yyyy'), and 'Detail \*' (with a placeholder 'Detail'). At the bottom right of the form is a blue 'Save' button. In the top right corner of the main window, there is a 'Notifications' icon with a red notification dot.

Figure 69: Add credit

Employees and admin/manager can add credit amount in this page including date, and the details.

## 5.2.18 Add expense

The screenshot shows the 'Add Expense' form within the AAAG Trading application. The left sidebar contains a navigation menu with categories like Main Navigation, Sales & Expenses (selected), and Admin. Under Sales & Expenses, 'Expense System' is expanded, showing 'Add Expense' and 'Expense List'. The main content area has a title 'Add Expense' and three input fields: 'Amount' (with placeholder 'Amount'), 'Date' (with placeholder 'mm/dd/yyyy'), and 'Description' (with placeholder 'Description'). A blue 'Save' button is at the bottom right.

Figure 70: Add expense

In this page, any outside expenses can be added.

## 5.2.19 Expense list

The screenshot shows the 'Expense List' page. The left sidebar is identical to Figure 70. The main content area has a title 'Expense List' and a search bar with placeholder 'mm/dd/yyyy' and a 'Search' button. Below is a table with four columns: 'Amount', 'Description', 'Date', and 'Action'. One row is visible, showing '16,212' for Amount, 'For Supplies' for Description, 'May 16, 2022' for Date, and two buttons 'Update' and 'Delete' for Action.

Amount	Description	Date	Action
16,212	For Supplies	May 16, 2022	<button>Update</button> <button>Delete</button>

Figure 71: Expense list

This page shows the list of the added expenses

## 5.2.20 Update expense

The screenshot shows the 'Update Expense' form within the AAAG Trading application. The left sidebar contains a navigation menu with sections like Main Navigation, Product, Customers, Banking System, Sales & Expenses, Expense System (selected), Add Expense, Expense List, Sales, Logs & Reports, Stock Logs, Reports, Admin, AdminPanel, User, and Logout. The top header displays 'Abu Abeer al Gawabry Trading' and 'Notifications'. The main content area has a title 'Update Expense' and fields for 'Amount' (16212), 'Date' (mm/dd/yyyy), and 'Description' (For supplies). A 'Save' button is at the bottom right.

Figure 72: Update expense

Expenses can be updated using this page

## 5.2.21 Invoice Page

The screenshot shows the 'Invoice Page' in the AAAG Trading application. The left sidebar includes a 'Sales' section with options for Create Invoice and Invoices List, along with other sections like Stock Logs, Reports, Admin, AdminPanel, User, and Logout. The main area features a table with columns Item, Stock, Price, Quantity, and Total. Above the table, it says 'Billed To: 17-06-22' and 'Customer' (with a dropdown for Cash). Below the table, there's a 'New Customer' section and a summary row with 'Total Qty: 0.00' and 'Grand Total 0.00'. Further down are sections for 'Customer Ledger' (Received Amount 0, Remaining Amount 0) and 'Cash Calculator' (Cash Payment 0, Returned Cash 0). At the bottom are buttons for 'Add Item' and 'Create Invoice'. The footer includes copyright information and a version number (Version 1.1.0).

Figure 73: Invoice page

The purchase invoice can be created on this page. A new customer can also be created here.

There is an option to choose between installments and cash

## 5.2.22 Invoice list

The screenshot shows the 'Invoice List' page. On the left is a dark sidebar with navigation links: Product, Customers, Banking System, Sales & Expenses, Expense System, Sales (selected), Create Invoice, Invoices List, Logs & Reports, Stock Logs, Reports, Admin, AdminPanel, User, and Logout. The main area has a title 'Invoice List' and search/filter fields for Name, Invoice No., Date, and a 'Search' button. Below is a table with the following data:

Date	Invoice	Customer	Payment	Installment	Quantity	Sub Total	Grand Total	Action
June 14, 2022	0000014	Wahid	Cash	-	2	0	52	<button>View</button> Not Available
June 14, 2022	0000013	Wahid	Installment	✓	20	0	340	<button>View</button> <button>Installments</button>
June 13, 2022	0000012		Cash	-	1	0	32	<button>View</button> Not Available
June 13, 2022	0000011	Test	Cash	-	200	0	20,000	<button>View</button> Not Available
June 13, 2022	0000010	Test	Cash	-	200	0	3,400	<button>View</button> Not Available
June 13, 2022	0000009	Immanuel	Installment	-	100	0	1,700	<button>View</button> Not Available
June 13, 2022	0000008	Immanuel	Installment	✗	1	0	25	<button>View</button> <button>Installments</button>
June 13, 2022	0000007		Cash	-	2	0	34	<button>View</button> Not Available

Figure 74: Invoice list

The list of invoices made can be viewed here.

## 5.2.23 view invoice

The screenshot shows the 'View invoice' page. The sidebar is identical to Figure 74. The main area has buttons for 'Create Invoice' and 'Print Invoice'. The title is 'Abu Abeer al Gawabry Trading'. The invoice details are as follows:

Invoice

**Customer Name:** Wahid  
**Mobile No:** 23213123  
**Customer Pin:** 69420

**Billed Date:** 14-06-22  
**Payment Type:** Cash  
**Receipt No:** 0000014

Item	Quantity	Total
Red Table	2	52
<b>Total Quantity:</b> 2		<b>Grand Total</b> 52
		<b>Cash Payment</b> 52
		<b>Returned Cash</b>
		<b>Received Amount</b> 52
		<b>Remaining Payment</b> 0

Thank You  
Abu Abeer al Gawabry Trading

Figure 75: View invoice

The invoices made can be viewed here

## 5.2.24 Print voice

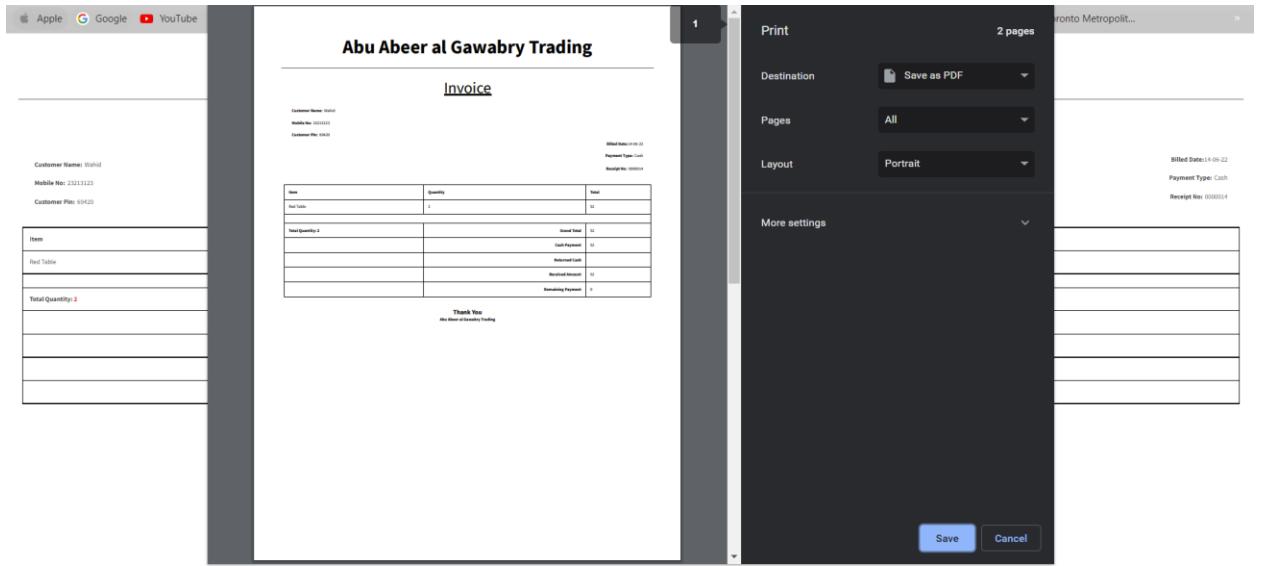

Figure 76: Print invoice

Existing invoice can be printed on this page in a pdf format

## 5.2.25 View installment

The screenshot shows the 'AAAG Trading' application interface. The left sidebar contains a 'Main Navigation' menu with items like 'Product', 'Customers', 'Banking System', 'Expense System', 'Sales', 'Create Invoice', 'Invoices List', 'Stock Logs', 'Reports', 'AdminPanel', 'User', and 'Logout'. The main content area is titled 'Abu Abeer al Gawabry Trading' and shows a 'View Invoice' and 'Add Installment' button. Below this is a table titled 'Installments' with columns: Date, Invoice, Customer, Paid Amount, Description, and Action. The table contains two rows: one for June 14, 2022, with Wahid as the customer and a paid amount of 250, described as 'Advance Payment'; and another for June 2, 2022, with Wahid as the customer and a paid amount of 100, described as 'Added installment'. At the top right of the main content area, there are notifications for 'Home', 'View Invoice', and 'Installments'. A message at the top right indicates 'Total Installment Paid: 350' and 'Remaining Installments: -10'.

Figure 77: view installment

Customers who have installments can be viewed here.

## 5.2.26 Add installment

The screenshot shows the AAAG Trading software interface. The left sidebar contains a navigation menu with categories like Main Navigation, Sales & Expenses, Admin, and User. The 'Sales' category is currently selected. The main content area is titled 'Abu Abeer al Gawabry Trading'. A sub-titler 'Add Installment' is displayed above a form. The form fields include 'Customer Name: Wahid' and 'Item: Berger Paints'. The 'Amount\*' field is empty, and the 'Date\*' field shows 'mm/dd/yyyy'. The 'Description\*' field is also empty. A blue 'Save' button is at the bottom right of the form.

Figure 78: Add installment

New installments can be added here.

## 5.2.27 Daily logs

The screenshot shows the AAAG Trading software interface. The left sidebar contains a navigation menu with categories like Main Navigation, Sales & Expenses, Admin, and User. The 'Stock Logs' category is currently selected. The main content area is titled 'Abu Abeer al Gawabry Trading'. A sub-titler 'Daily Stock Logs' is displayed above a table. The table has columns for 'Item Name', 'No. of Invoices', and 'Stock Out'. A search bar labeled 'Search...' and a date filter labeled 'Filter By Date' (set to 06/17/2022) are at the top of the table. A message 'Logs Date: 2022-06-17 | Total Price: OMR. 0' is shown. Below the table, it says 'No Logs Found'.

Figure 79: Daily logs

The list of daily logs of sales is available in this page and can be filtered by date and name.

## 5.2.28 Monthly stocks

The screenshot shows the AAAG Trading application interface. On the left is a dark sidebar with a white header 'AAAG Trading' and a 'Main Navigation' section containing links for Product, Customers, Banking System, Sales & Expenses, Expense System, Sales, Stock Logs (which is currently selected), Daily Logs, Monthly Logs, Reports, Admin, AdminPanel, User, and Logout. The main content area has a blue header 'Abu Abeer al Gawabry Trading' and a 'Notifications' icon with a red dot. Below the header is a breadcrumb 'Home > Monthly Logs'. The main content is titled 'Monthly Stock Logs | June 2022'. It features a search bar, a 'Filter By Month' dropdown set to 'June', and a message 'Logs Date: June 2022 | Total Price: OMR. 25583'. A table lists four items: Asian Paints (1 invoice, 1 stock out), Berger Paints (6 invoices, 535 stock out), Marble Tiles (1 invoice, 1 stock out), and Red (2 invoices, 3 stock out).

Figure 80: Monthly logs

Sales made in the month can be seen here.

## 5.2.29 Reports

The screenshot shows the AAAG Trading application interface, identical to Figure 80 but with a different report. The sidebar and header are the same. The main content area is titled 'Monthly Sales Reports' and includes a chart showing sales volume from July 2021 to June 2022, with a significant spike in May and June. Below the chart is a table titled 'Monthly Sales Reports' with data for June 2022:

Date	Total Customer	Total Quantity	Grand Total	Total Cash Payment
Jun-22	7	526	25583	507

Figure 81: Month reports

This page shows the report of monthly sales along with a sales graph.

### 5.2.30 Admin panel

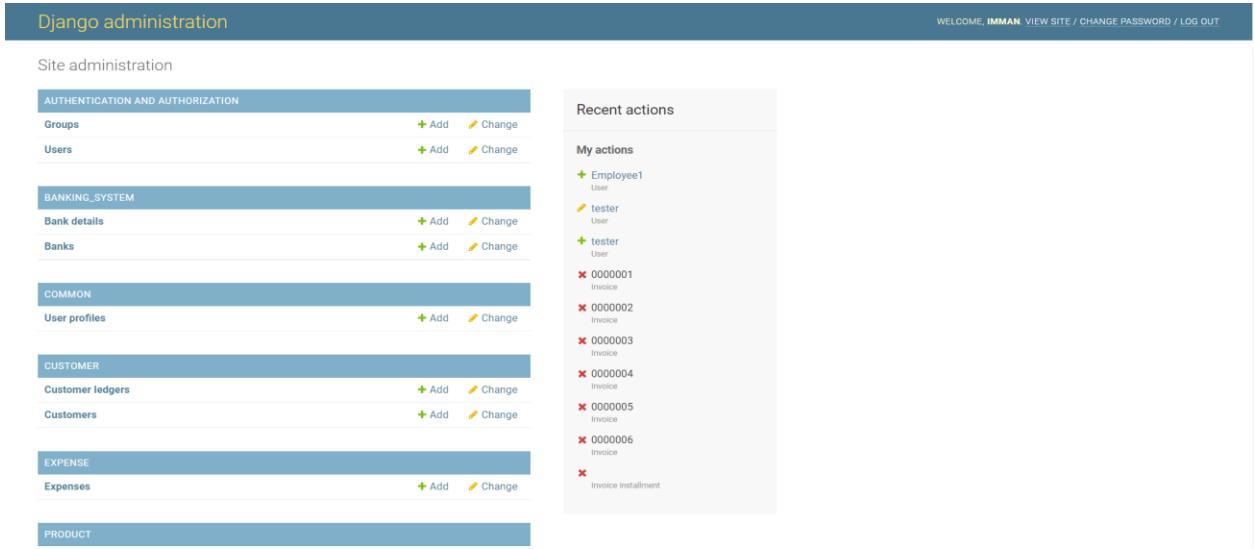

Figure 82: Admin panel

The admin has overall view of the system and can control from the backend. This page allows the admin to add employees, delete employees and give employees permissions

## **5.3 Testing and evaluation**

### **5.3.1 Importance of testing**

Software testing is the process of assessing whether a software system satisfies the anticipated criteria and ensuring that it is defect-free. It consists of putting apps elements through their paces with manual or computerized technologies in order to evaluate one or more characteristics of interest. The objective of software testing is to identify errors, deficiencies, or incomplete specifications when compared to the actual specifications. When working on a software development project, one should be aware that mistakes can occur at any stage of the life cycle (indiamsoftware,2022)

### **5.3.2 Test strategy**

For testing, data for running tests was gathered from system determinations and then utilized to test every feasible part or entry as input. Following each test trial, the true outcome was contrasted with the typical outcome.

This online framework is large and highly regulated, which is why the testing framework methodology was chosen as the testing method to shorten the testing cycle and produce all-around reported results. The system has multiple internet pages, and each page contains multiple connections and verifications that ensure the system's success and productivity.

#### **Test plan**

A test plan is a document that specifies the scope, strategy, and timeline for testing operations. The test plan may also include a list of the resources required for the software tester to function efficiently (wearedevelopers,2021)

A test case was developed to make sure the functionality of the system is working well since the web application has multiple pages and multiple connections that need to be made for it to perform according to the expectations

### 5.3.3 Test cases

The following are the test cases for the system

Test Case: Employee Functions		
Number	Date Created	Created By
Tc 001	14/6/2022	Immanuel

Login page: Testing the functionalities of login page						
S.NO	Description	Expected Output	Expectation	Remarks	Date	By
1	Enter the correct username and password	Successful login	<input checked="" type="checkbox"/> As per expected result <input type="checkbox"/> Not As per expected result	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta
2	Enter the incorrect username and password	Incorrect Login	<input checked="" type="checkbox"/> As per expected result <input type="checkbox"/> Not As per expected result	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta

Product Page						
Description	Expected Output	Expectation	Remarks	Date	By	
Add product category	Successfully Added	<input checked="" type="checkbox"/> As per expected result <input type="checkbox"/> Not As per expected result	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta	

<b>Add Product</b>	Added successfully	<input checked="" type="checkbox"/> As per expected result  <input type="checkbox"/> Not As per expected result	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta
<b>List of products</b>	Shows list of products	<input checked="" type="checkbox"/> As per expected result  <input type="checkbox"/> Not As per expected result	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta

Description	Expected Output	Expectation	Remarks	Date	By
<b>Add Product</b>	Successfully Added	<input checked="" type="checkbox"/> As per expected result  <input type="checkbox"/> Not As per expected result	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta
<b>Update Product</b>	Product update	<input checked="" type="checkbox"/> As per expected result  <input type="checkbox"/> Not As per expected result	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta

### **Customer Page**

Description	Expected Output	Expectation	Remarks	Date	By
<b>Add Customer Details</b>	Successfully Added	<input checked="" type="checkbox"/> As per expected result <input type="checkbox"/> Not As per expected result	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta
<b>View Customer list</b>	Can view list	<input checked="" type="checkbox"/> As per expected result <input type="checkbox"/> Not As per expected result	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta

### **Bank Page**

Expected Output	Expectation	Remarks	Date	By
<b>Add Bank information</b>	<input checked="" type="checkbox"/> As per expected result <input type="checkbox"/> Not As per expected result	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta
<b>View Bank List</b>	<input checked="" type="checkbox"/> As per expected result <input type="checkbox"/> Not As per expected result	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta

### **Notification**

Expected Output	Expectation	Remarks	Date	By
<b>Notification if an item has low stock</b>	<input checked="" type="checkbox"/> As per expected result <input type="checkbox"/> Not As per expected result	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta

<b>Expense System</b>				
<b>Expected Output</b>	<b>Expectation</b>	<b>Remarks</b>	<b>Date</b>	<b>By</b>
<b>Add expense</b>	<input checked="" type="checkbox"/> As per expected result <input type="checkbox"/> Not As per expected result	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta
<b>Expense List</b>	<input checked="" type="checkbox"/> As per expected result <input type="checkbox"/> Not As per expected result	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta
<b>Sales Page</b>				
<b>Expected Output</b>	<b>Expectation</b>	<b>Remarks</b>	<b>Date</b>	<b>By</b>
<b>Create invoice</b>	<input checked="" type="checkbox"/> As per expected result <input type="checkbox"/> Not As per expected result	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta
<b>List of invoices</b>	<input checked="" type="checkbox"/> As per expected result <input type="checkbox"/> Not As per expected result	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta
<b>Stock Logs</b>				
<b>Expected Output</b>	<b>Expectation</b>	<b>Remarks</b>	<b>Date</b>	<b>By</b>
<b>Daily logs</b>	<input checked="" type="checkbox"/> As per expected result <input type="checkbox"/> Not As per expected result	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta

<b>Monthly logs</b>	<input checked="" type="checkbox"/> As per expected result <input type="checkbox"/> Not As per expected result	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta
<b>Reports</b>				
<b>Expected Output</b>	<b>Expectation</b>	<b>Remarks</b>	<b>Date</b>	<b>By</b>
<b>View reports</b>	<input checked="" type="checkbox"/> As per expected result <input type="checkbox"/> Not As per expected result	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta
<b>Notifications</b>				
<b>Expected Output</b>	<b>Expectation</b>	<b>Remarks</b>	<b>Date</b>	<b>By</b>
<b>Show low stock notifications</b>	<input checked="" type="checkbox"/> As per expected result <input type="checkbox"/> Not As per expected result	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta

**Test Case: Admin Functions**

Number	Date Created	Created By
Tc 002	28/5/2022	Immanuel

**Testing functionalities of system Admin**

S.NO	Description	Expected Output	Expectation	Remarks	Date	By
1	Change user Password	Changed user password	<input checked="" type="checkbox"/> As per expected result <input type="checkbox"/> Not As per expected	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta
2	Edit user information	User information changed	<input checked="" type="checkbox"/> As per expected result <input type="checkbox"/> Not As per expected	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta
3	Change user permissions	Changed user permissions	<input checked="" type="checkbox"/> As per expected result <input type="checkbox"/> Not As per expected	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta
4	Change user status	Changed user status	<input checked="" type="checkbox"/> As per expected result <input type="checkbox"/> Not As per expected	<input checked="" type="checkbox"/> Pass <input type="checkbox"/> Fail	14/6/2022	Putta

<b>Product Page</b>

### 5.3.4 Analyzing the results

From the above test cases, it is evident that the web application works as its intended to. This makes the system ready for deployment. All the proposed functionality of the system tends to be working perfectly as expected.

## **5.4 Deployment**

### **5.4.1 Requirement analysis**

Client requirements: The minimum requirement for this web application is an internet browser that can support complex HTML such as Google Chrome, Safari, Edge.

The web application is not software heavy but an operating system of Windows 7 professional or above is preferred.

Training requirements for users: This is a simple inventory system that does not require many skills to use. However, an average skill in using computer devices and navigation skill is preferred.

## **5.5 Critical evaluation of the system**

The benefit of computerized sales and inventory is that it makes the process of documenting sales and inventory more efficient and precise. This results in an effective and efficient sales and inventory system capable of correctly monitoring the movement of items from sales and inventories. Such administration may be done manually for a small firm with few items; but, as the size of the business expands and the list of products grows, such management becomes more difficult. It becomes difficult and time-consuming to keep track of sales and inventories. That is why researchers are working to create a computerized point of sale and inventory system solution that can efficiently manage sales and inventory system duty.

The price of a sales and inventory system is sometimes prohibitively high, and pricing is typically a concern for any system, but this system is not too expensive. Sales and inventories facilitate company operations. Understanding the fundamentals might be tough and time-consuming, especially if you don't have a firm grasp on a computer.

# **Chapter 6: Conclusions and recommendations**

## **6.1 Conclusion**

The primary aim of the project was to design and implement an inventory material management system for, and organization called Abu Abeer al Gawabry trading.

The aim of the project was to give the company a new system that will be used to add item category, add product, view list of products, edit the list of products with more functions such as stock in, stock out, add customer information, update customer information, banking system, expense system, sales, stocks, and reports.

All the objectives and the requirements have been met successfully and it is ready for deployment

### **6.1.2 Evaluating the contribution of the project**

The project has addressed the problem of the need of an industry grade inventory management system for a company in Oman that is based on the trade of construction materials. The system consists of various tool and packages that help put it together.

The system is not only limited to construction materials but can also be used for medical records, Human resource and anything that requires the data to be stored.

## 6.2 Recommendations

This project can be developed further in so many ways since it is developed using python and Django.

- **Prediction of sales:** Prediction of sales based on the date can be a very good way for knowing whether an item will sell good or not
- **Enhanced security:** two factor authorization can be added to make the system even more secure
- **Barcode scanning:** This will make it easier to search for products when the inventory system gets a lot of items and makes it easier instead of the simple search function
- **Multiplatform compatibility:** The web application is limited to web browsers only. There will be future plans to develop it to mobile application and tablets.

## 6.3 Limitations

- Tracking product is inconsistent: in the construction business, there are different building materials that have different sizes and code. That is not applied in this system. There are future plans to add this.
- Currently the web application only works on PC. It does not work on mobiles or any other devices. There are future plans to make this work

## 6.4 Impact of the project

The Technology Impact attributable to the Project, as estimated upon completion of the Project, is referred to as the Project Impact. Both positive and negative influences within the Project Assessment Boundary must be considered when determining the Project Impact (Lawinsider, 2020)

#### **6.4.1 Social impact**

This project will be helpful to any company or person trying to store data regarding sales or analysis. The system is not only limited to one business. It can be used in hospitals and other businesses too.

#### **6.4.2 Ethical impact**

The project is an inventory management whose sole purpose is to manage inventory.

The sensitive details about the customer and the users will be stored. This should not be manipulated. Manipulation of inventory figures and levels when a client questions his inventory levels or inquiries about inventory management circumstances.

All the information about the users stored in the system is safe and protected by Django's safety protocols. Only the admin of the system has access to user passwords and has the capability to change the personal information upon demand.

#### **6.4.3 Legal impact**

The resources for making the project have been taken from online sources and research papers are given credits accordingly. Most of the templates required to make the project have been taken from online sources.

# APPENDICES

## 1. Codes:

### 1. Back end

#### Main Admin

```
from django.contrib import admin

from banking_system.models import BankDetail, Bank

class BankAdmin(admin.ModelAdmin):

    list_display = (
        'name', 'branch', 'account_number'
    )

    class BankDetailAdmin(admin.ModelAdmin):

        list_display = (
            '__str__', 'debit', 'credit', 'invoice', 'description', 'date'
        )

admin.site.register(Bank, BankAdmin)

admin.site.register(BankDetail, BankDetailAdmin)
```

#### Main Apps code

```
from django.apps import AppConfig

class BankingSystemConfig(AppConfig):

    name = 'banking_system'
```

## Main Models code

```
from django.db import models

## 1. Survey Questions

Inventory management system

immanuelssam95@gmail.com (not shared) [Switch account](#)

\* Required

Gender \*

Male  
 Female  
 Prefer not to say

Are you experience in inventory management

Yes  
 No

Figure 83:Survey questions 1&2

On the given scale, how would you rank the current system in place

1	2	3	4	5	
Very satisfied	<input type="radio"/> Unsatisfactory				

Does the current system have security issues?

Yes  
 No

Did you ever feel hardships in using the current system?

Yes  
 No  
 Maybe

Figure 84: Survey question 3,4&5

Would you want to have a system that is superior to the current one?

Yes  
 No  
 Maybe

how easy is the current system to use?

1	2	3	4	5	
very hard	<input type="radio"/> Very easy

### 3. No Objection Certificate

Abu Abeer al Gawabry Trading

**Date:** January 5,2022

**To:** Immanuel Sam  
Student of Data analytics in Middle East College

**Subject: Implementation of a Web based inventory management system**

Dear Immanuel,

This letter certifies that the company gas provided you the permission to design and implement a web-based inventory management system for our company.

This approval form was provided to you at your request

Best regards,

*Komaid Basha*

## 4. Project initiation report

### Project Initiation Report

#### 1. Proposed Project Title:

Construction material management system for Abu Abeer Al gawabry trading using Django.

#### For whom is the system being developed for?

The system is being developed for Abu Abeer Al gawabry trading. It is a building material company located in hamra.

Abu Abeer Al gawabry trading is a company that focuses on selling building material and contracting building material. They work with clients such as Petroleum development Oman(PDO). The company was established in 2010.

#### 2. Please describe the type of the project being planned.

The project being planned is a live project for Abu Abeer Al gawabry trading.

The project will give the company a new system that will be used to store, add, delete, update building materials, employer details, customer details from the company database.

The existing system does not have enough functionalities for a good inventory system. It is an outdated and basic system.

The proposed system will change all that and give them a better system that can separate the users based on privileges like manager, customer, and employee with each of them having their own privilege.

The project will be built using python and Django module for python. The database will be within python.

Django is a Python-based free and open-source web framework that follows the model-template-views architectural pattern

Django will give the project a clean design.

The project will be a fully live project with the ability to host in a live server by sharing a key.

The project will be coded on Microsoft VS code using python language with the Django plugin for hosting the web application.

#### 3. State the reason(s) for selecting this topic (pls. mention the nature of the problem that is currently being faced and the key benefits that can be achieved by this project)

Abu Abeer Al gawabry trading currently has a system that is outdated and can only do basic functions like adding, updating, deleting items along with basic calculation functions.

The proposed system will make everything better and will give it UI, login function for staff, customers, a username, and password system, retrieving username and password if the staff or customers forget it and a better overall template. The proposed system will also have a better inventory management system.

The project will have a separate login for Manager, employees, and customers. Each of them will have different privileges. The manager will be able to overlook all the employees and their information. The manager can see how many items have been ordered, by who its orders and the date its ordered.

Employees will be able to add, insert, update delete the items in the store and customers will be able to choose what they want to order and add them to a cart.

There will be a create account page which will allow the customer to create an account. If the customer, employee or manager forget their password, they will get an email to change it. They can even add a profile image.

The system will also a visualized chart showing all the items that are available in the inventory.

#### 4. What will be the main challenge(s) for you in doing this project?

The main challenges faced will be the coding using python and Django. Learning the modules and applying it in a live project will be a little challenge.

Name of the Project Supervisor: Mr. Puttaswamy Malali

Name & ID of the Student: Immanuel Sam(18f18274)

Signature of the Student:
